Verified Outcome

Uniting IT Ecosystems Around a Single Source of Truth

A shared curriculum ensures seamless collaboration across previously siloed development, operations, and quality assurance teams.

The DevOps Capability Architecture

Release Management

Planning, scheduling, and controlling software builds to minimize disruptions.

Copado Implementation

Configuring and deploying DevOps solutions on the Salesforce platform.

DevOps Optimization

Enhancing collaboration to improve efficiency and reduce deployment times.

Salesforce Deployment

Implementing solutions to ensure efficient system integration and user adoption.

Compliance & Governance

Ensuring adherence to laws, regulations, and internal data policies.

Team Collaboration

Fostering innovation and problem-solving across engineering and operations.

Building the Foundation: Modules 1 to 3

Step 1: Introduction to Copado

Understanding the role of Copado as a DevOps platform and the significance of efficient Salesforce development.

Step 2: Initial Copado Configuration

Setting up environments, creating user accounts, defining roles, and configuring organization-wide preferences.

Step 3: Org Credentials

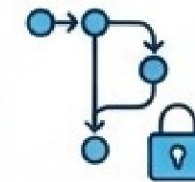

Best practices for managing and securely storing Salesforce org credentials and connection settings.

Mastering Version Control: Modules 4 & 5

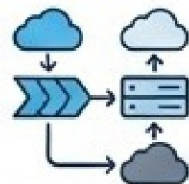

Critical for seamless collaboration and conflict resolution.

Step 5: Git Repository

Integrating Copado with Git version control, setting up repositories, managing branches, and performing commits and merges.

Step 4: Environments

Creating multiple environments to represent development stages, configuring environment variables, and establishing hierarchies.

Step 4: Environments

Creating multiple environments to represent development stages, configuring environment variables, and establishing hierarchies.

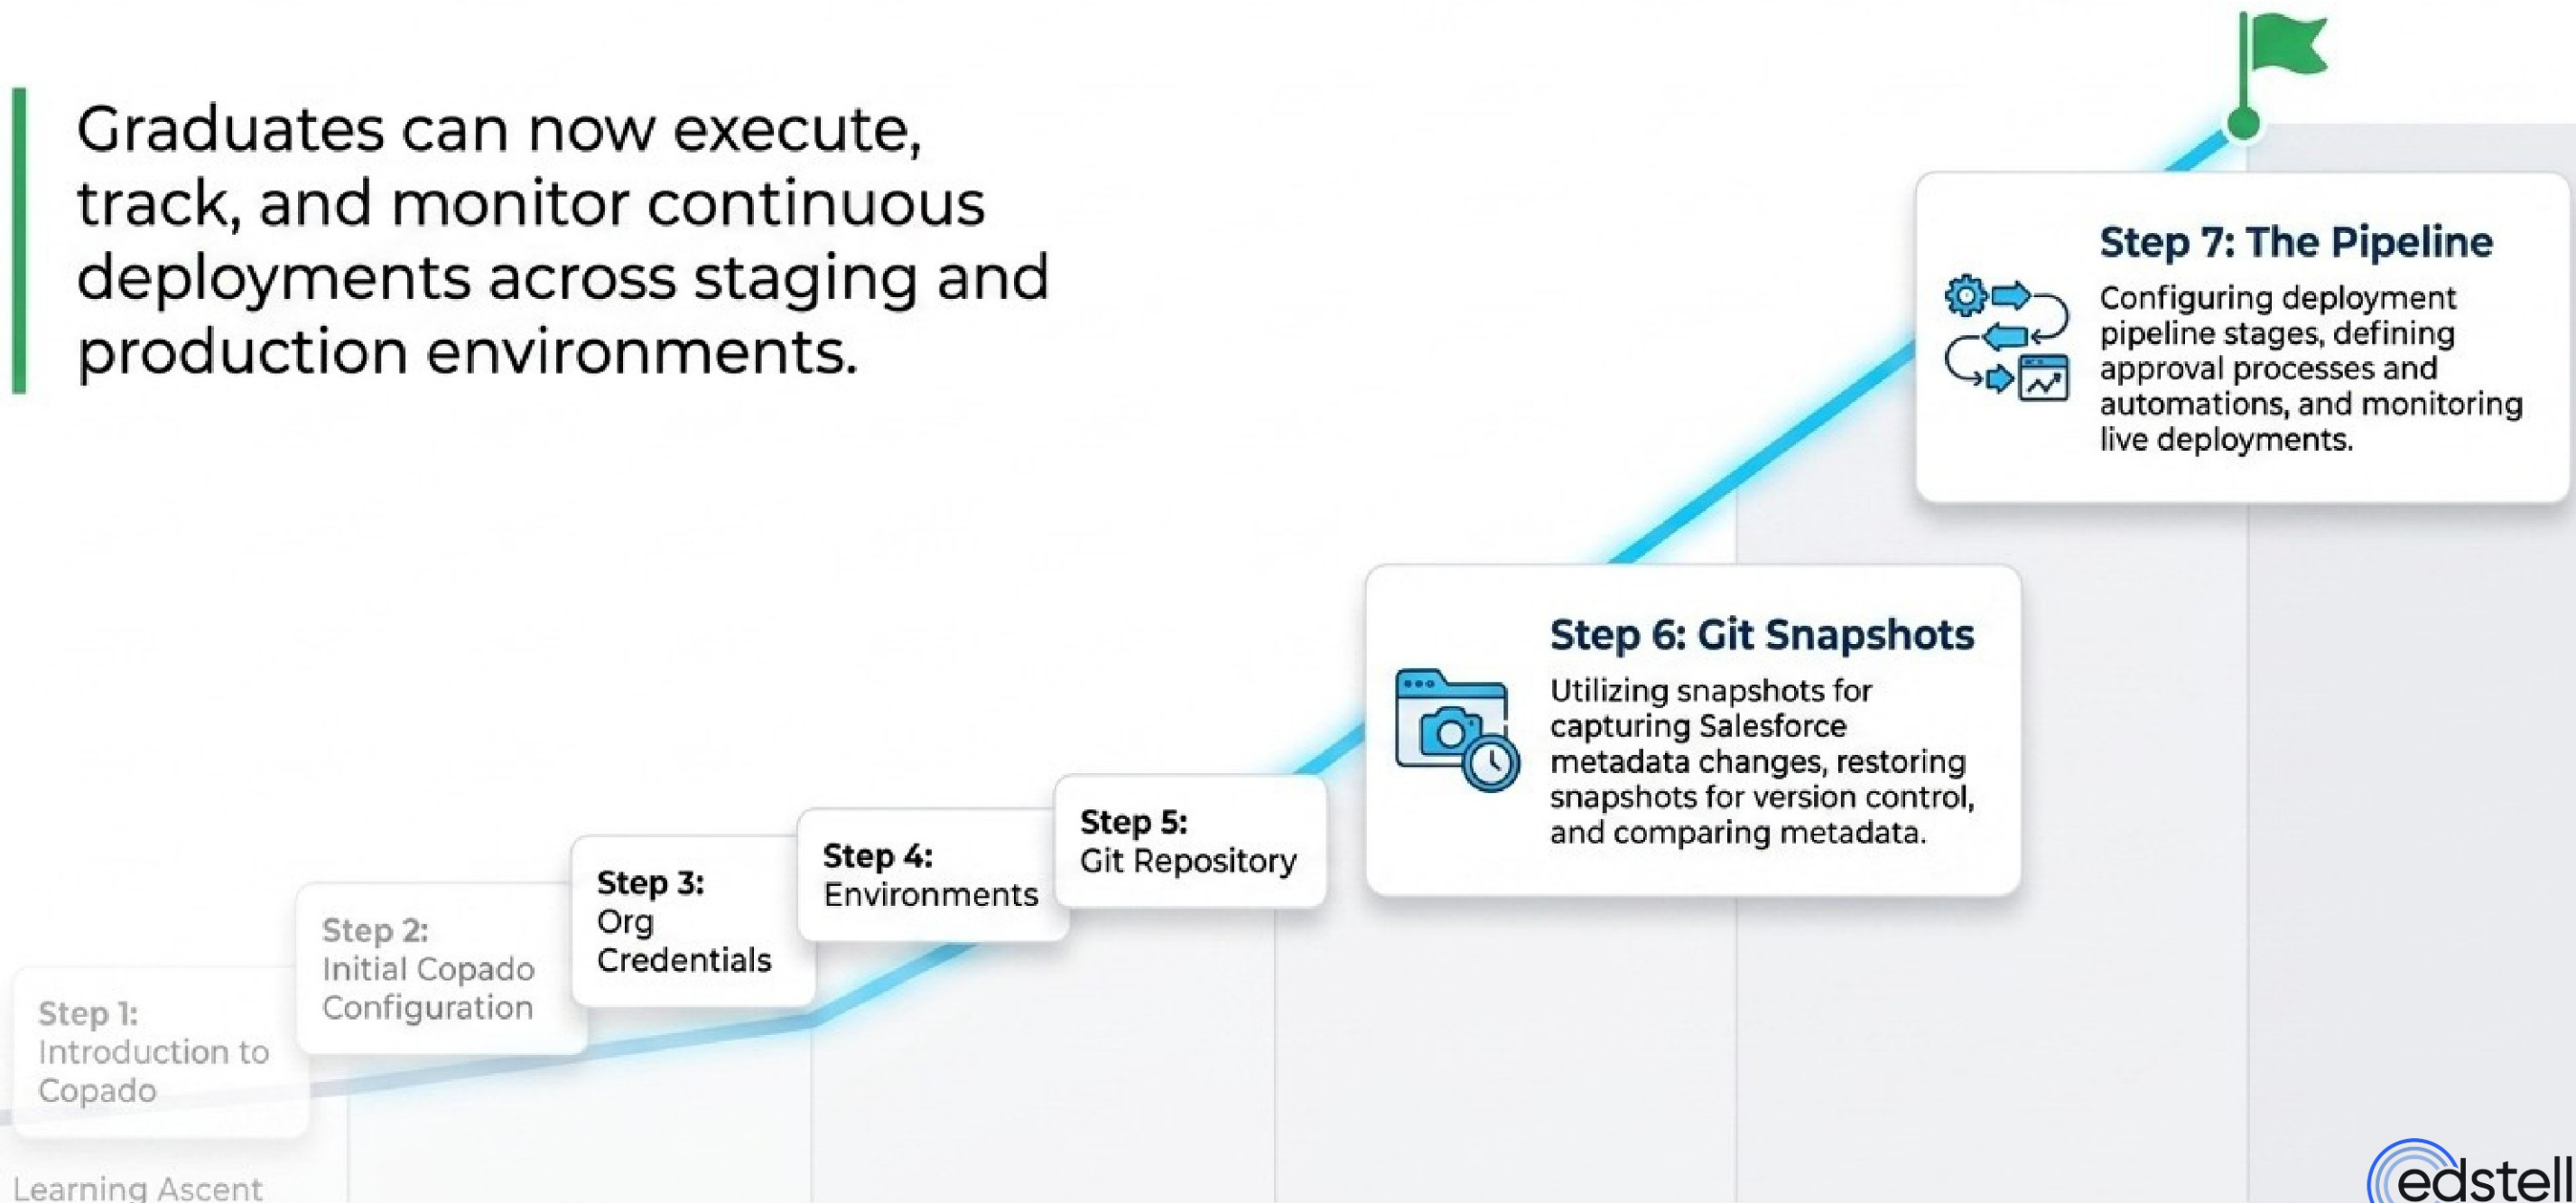

Step 1: Environments

Creating multiple environments to represent development stages, configuring environment variables, and establishing hierarchies.

Automating the Release Pipeline: Modules 6 & 7

Graduates can now execute, track, and monitor continuous deployments across staging and production environments.

The Copado CI/CD Engine in Action

Aligning Delivery Modality With Your Operations

	Virtual Instructor-Led	On-Site Instructor-Led	Off-Site Instructor-Led
Best For	Distributed global teams	Teams needing tailored workspace setups	Immersive focus & team building
Core Benefit	Consistency & easy scheduling	Live demos with company tools	Uninterrupted focus & retention
Team Interaction	Interactive digital tools	Direct hands-on collaboration	Built-in group bonding activities
Logistics	No travel required	Trainer travels to your office	Hosted at a preferred venue
