LabXchange - Press Kit

Need something else? Please reach out to learn@labxchange.org!

1. About us

LabXchange is an online learning platform home to thousands of free learning and teaching resources in subjects spanning science, technology, engineering, mathematics, and medicine (STEMM). Launched in 2020 as an initiative of Harvard University's Vice Provost for Advances in Learning and with support from the Amgen Foundation, LabXchange creates virtual lab simulations, science career simulations, interactive animations, and other digital educational resources designed to empower every learner to find their place in science. In addition, LabXchange has collaborated with science education organizations from across the globe to curate a growing library of high-quality resources that are entirely free to use for learners and educators everywhere.
