

MANUFACTURING EXCELLENCE DEPENDS ON EVERY CONNECTION

From the largest power distribution systems to the smallest electrical contact interface - performance, reliability, and efficiency are built into every Checon component.

For more than 65 years, Checon has partnered with OEMs and manufacturers to solve complex electrical power and switching challenges through the development of electrical contacts, contact materials, and copper and aluminum bus bars with integrated electrical contacts.

As a vertically integrated engineering and manufacturing partner, Checon combines materials engineering, precision manufacturing, and assembly expertise to help customers improve electrical performance, simplify supply chains, and accelerate product development.

Whether supporting new designs or improving existing products, we work alongside our customers to deliver reliable solutions for demanding power distribution, industrial, transportation, and energy applications.

PERFORMANCE BEGINS AT THE CONTACT INTERFACE.
