

OpenAI Migration Fast Track

One week to a plan. Four to five weeks to a live AWS environment. Same models, AWS security. 100% funded by AWS for qualified customers.

For companies running OpenAI in production, the migration question has always come with friction: how long, how much, and how disruptive. The OpenAI Fast Track to AWS answers all three. In as little as six weeks, Loka assesses your current OpenAI workloads, designs the target AWS architecture, and executes the migration to Amazon Bedrock. The engagement is fully funded by AWS for qualified customers migrating from OpenAI or Azure OpenAI.

As a global OpenAI on Bedrock launch partner with 500+ GenAI and Agentic launches since 2023, Loka handles both phases end to end. Your team keeps the models they already use. Everything else moves to AWS.

9.7 out of 10
(80+ AWS Customer Reviews)

NOW LIVE: OpenAI models GA on Amazon Bedrock. Loka is a global launch partner.

Why Fast Track with Loka

Generous Funding

AWS covers your full assessment cost and up to 100% of your migration for qualified customers. Qualification is confirmed during your discovery call.

One week to a plan

Assessment completed in as little as one week. Workloads inventoried, architecture mapped, migration plan ready.

Two Entry Points

OpenAI direct or Azure OpenAI. One fast track to move you to production the right way.

How It Works

Phase 1:
Fast Track Assessment | Up to 1 week

Inventory your OpenAI workloads: API usage, spend, prompts, models and data flows. Map the target AWS architecture and confirm qualification criteria. Receive a migration plan ready to execute before the week is out.

Phase 2:
Fast Track Migration | 4 to 5 weeks

Execute the full migration of your qualified OpenAI workloads to Amazon Bedrock with Loka. Identity, networking, KMS, observability and data flows are all sequenced and tested. Hand off your team with runbooks and observability in place.

What You Get

Fast Track Assessment report
Workload inventory, AWS architecture map, compliance posture, and a migration plan delivered in one week.

Full production migration
Qualified OpenAI workloads migrated to Amazon Bedrock, tested, and live on AWS.

Post-migration handoff
Runbooks, observability setup, and knowledge transfer to your engineering team.

Additional funding surfaced
If other workloads are in scope or additional AWS programs apply, Loka identifies and unlocks those separately.

Qualification Criteria

- Minimum \$5,000 per month in OpenAI API spend, or at least one active production OpenAI workload
- Workloads are actively running in production, not pilots or proofs of concept
- Migration scope is OpenAI workloads only. Other workloads are estimated and funded separately
- Company meets AWS funding eligibility requirements, confirmed on the discovery call

What Customers Say

"We had a very aggressive timeline. Building on AWS with Loka allowed us to scale and get to market very quickly. We are now live on about 2,000 providers and they are seeing a reduction in times per visit between 5 to 15 minutes per encounter."

Chris Hoffman
Chief Architect at Experity Health

Who Is This For?

- Companies on OpenAI direct with production workloads ready to move to AWS
- Teams on Azure OpenAI looking to end the two-cloud split fast
- Companies with qualified OpenAI workloads in production
- Teams with executive mandate to move to AWS quickly, with a fully funded path to do it
