LOKA | aws

AWS AI-DLC Transformation with Loka

Move one AI use case from pilot to production in weeks, not months.

aws PARTNER OF THE YEAR LOKA

aws 200 CERTIFIED

Claude Preferred Services Partner

500+ GenAI & Agentic projects since 2023,
50% in or moving to production

Loka's Forward Deployed Engineers (FDEs) work alongside your team, directly in your codebase, using AI-powered coding agents to overcome production blockers and deliver working software. AWS's AI-Driven Development Lifecycle (AI-DLC) applies specification-driven, agent-based AI development to accelerate every stage of the software lifecycle, from requirements to production-ready code.
Your team gets a working use case, measurable improvements in engineering velocity, and the AI skills and methodology to continue independently.

HOW IT WORKS

Step 1 — Assess & define

Assess your SDLC, select the right coding agent (Kiro, Claude Code, Codex, or any other you work with), and define specs for your target use case.

Step 2 — Build with AI-DLC

Turn specifications into working software through agent-driven development. Elaborate requirements in hours, ship code bolt by bolt, and track engineering velocity throughout implementation.

Step 3 — Benchmark & hand over

Benchmark results against your baseline, refine specs and guardrails, and hand over the methodology to your engineering leaders.

Timeline: Custom-scoped engagements designed for enterprise delivery.

WHAT YOU GET

One use case in production

Your FDE engineer delivers spec to production-ready code, on your real codebase.

Velocity benchmarks

Before-and-after benchmarks across development speed, software quality, and time to release. Owned by your team.

Full methodology transfer

Complete context layer plus trained engineering leaders. No ongoing dependency on Loka.

WHO IS THIS FOR?

CTOs & VPs of Engineering

Accountable for AI ROI, not just AI adoption

Enterprise with AI pilots or POCs

ready to move to production at scale

AWS customers

Ready to redesign delivery, not just add AI productivity tools

"From the beginning it was clear Loka was a fit. They have a deep understanding of customer experience, healthcare, AI, and AWS. What really impressed me was their ability to communicate AWS's offerings and offer full-stack, cross-functional solutions."
