LOKA | aws

AI-Driven Development Lifecycle Enablement at $0 Cost

Know exactly where your Software Development Lifecycle (SDLC) breaks, and what AI-Driven Development Lifecycle (AI-DLC) would fix, in 2 weeks, 100% funded by AWS.

aws PARTNER OF THE YEAR WINNER 2024

Claude Preferred Services Partner

500+ GenAI & Agentic projects since 2023,
50% in or moving to production

aws 200 CERTIFIED

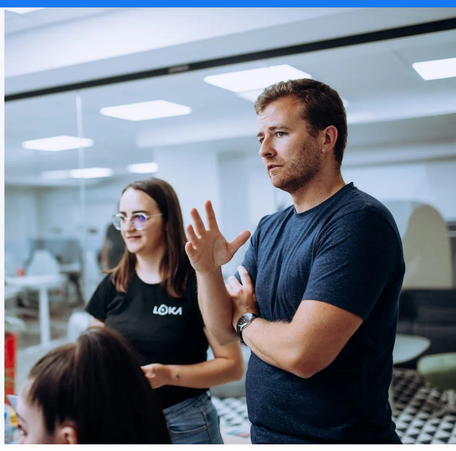

aws PARTNER Generative AI Competency

aws PARTNER Premier Tier Services

THE CHALLENGE

Most engineering teams are using AI tools but running the same processes: sprint ceremonies, handoff delays, weeks-long requirement cycles. Only 5% of companies generate sustained P&L impact from AI; the other 95% optimize individuals, not the process.

> Loka implements AWS's AI-Driven Development Lifecycle (AI-DLC) inside your engineering teams, redesigning how software gets built around agents. We match the right agent to your stack, build the specs and guardrails your codebase needs, and get your team compounding velocity from week one.

HOW IT WORKS

1. **SDLC audit and AI readiness mapping (1 Week)**
   Interviews with your PO, architect, and engineers. Inventory of current tooling, rituals, and bottlenecks across inception, construction, and operations.
2. **Real feature mapping (Week 2, Days 1-3)**
   We map one real feature through spec-driven development: requirements, design doc, task breakdown, and design your starter AGENTS.md, SKILLS.md, and guardrails.
3. **Readout and roadmap (Week 2, Days 4-5)**
   Plain readout deck that your team can act on immediately, plus all deliverables handed over.

WHAT YOU GET

AI-DLC adoption level
Gap analysis across inception, construction, and operations phases with a clear before/after picture.

Starter spec for a real workflow
Requirements, design, and task list built for one of your actual features, ready to run.

Your context layer foundation
Custom AGENTS.md, SKILLS.md, and guardrails drafted for your stack, standards, and compliance requirements.

Transformation roadmap with agent recommendation
Phased plan, effort estimate, investment signal, and the right agent for your team (ex: Kiro, Claude Code, Codex, etc.)

WHY ASSESS WITH LOKA

The right agent matched to your stack
Loka works across Amazon Kiro, Claude Code, and Codex to select the agent that best fits your environment and engineering needs.

Context engineered for your actual codebase
100+ AWS-certified AI engineers build agents, skills, specs, and guardrails for your workflows, standards, and codebase, not from a generic template.

Backed by production, not pilots
500+ GenAI and Agentic projects since 2023, with more than 50% in or moving to production.

WHO THIS IS FOR

CTOs and VPs of Engineering accountable for AI ROI, not just AI adoption.

Teams already using Kiro, Claude Code, or Codex but getting generic output.

Organizations with 10–200 engineers looking to compress time to production without adding headcount.

AWS customers eligible for MAP funding looking to apply it to SDLC modernization.

> "My schedule is crazy. Loka is who I call when I need the highest caliber talent to execute a project to our impossible standards."
