

Stepped Care Approach to Primary Mental Health Care

Cunnamulla

Stepped Care is a model of mental healthcare where service intensity is matched to an individual's treatment needs and severity of mental health issues. In a stepped care approach, a person is offered interventions and supports at an intensity that best meets their needs and preferences. When these needs and preferences change, the treatments and supports are changed accordingly.

This document aligns with the Australian Government's [Initial Assessment and Referral Decision Support Tool](#) for health professionals to use when assessing and supporting a patient and referring the appropriate services.
