Stepped Care is a model of mental healthcare where service intensity is matched to an individual's treatment needs and severity of mental health issues. In a stepped care approach, a person is offered interventions and supports at an intensity that best meets their needs and preferences. When these needs and preferences change, the treatments and supports are changed accordingly.

This document aligns with the Australian Government's [Initial Assessment and Referral Decision Support Tool](#) for health professionals to use when assessing and supporting a patient and referring the appropriate services.

1 Self-Management

May not meet diagnostic criteria, but increased risk e.g. family history, signs and symptoms.

Psychoeducation, online resources, focus on preventing onset or escalation.

2

Low Intensity Services

Symptoms do not interfere with daily functioning or cause significant distress.

Social supports, lifestyle changes, brief counselling or psychotherapy.

3 Moderate Intensity Services

Symptoms impact daily activities, relationships, and overall quality of life.

Structured, frequent, specialised psychological interventions.

4

High Intensity Services

Symptoms are severe (persistent or episodic) likely experiencing moderate or higher problems associated with risk, functioning and co-existing conditions.

Specialised mental health services, multidisciplinary support.

5 Acute & Specialist Community Mental Health Services

Severe and persistent mental illness and complex multiagency needs.

Out of scope for PHN funding. Specialised tertiary mental health services e.g. state hospital and health services.
