YULEX

From The Tree

Yulex specialty natural rubber is a plant-based raw material derived from the *Hevea brasiliensis* tree and used in YULEX® foams and YULASTIC® fibers.

Yulex Natural rubber is sourced from FSC® and/or PEFC®-certified smallholder farms, supporting responsible forest management and zero-deforestation practices.

Natural rubber is produced from renewable, biobased feedstocks, unlike non-renewable, fossil-fuel-derived polymer feedstocks.

A cradle-to-gate assessment of raw material production shows natural rubber has at least 80% lower CO₂e emissions than comparable fossil-derived elastomer feedstocks.
