

Anton Dubovik

Senior Product Designer

Bangkok · doobec101@gmail.com · +7 930 276-31-73 · Telegram @doob101 · nodesign.webflow.io · in/anton-dubovik-nodesign

Seven years in fintech and DevSecOps enterprise B2B. I design complex products end to end — research, flows, UI — and build the design systems and AI workflows that keep them consistent.

EXPERIENCE

Product Designer — TradeRadar, MOEX trading terminal · Moscow, remote · Jul 2024 – present

- Redesigned the terminal's chat in six weeks: new UI, mobile version, broadcasts, favorites, group chats, and an Owner/Admin/Member role model built to Russian financial-correspondence law. MAU grew from 300 to 680 in the four months after release, as Telegram and WhatsApp blocks in Russia pushed professional correspondence onto compliant platforms.
- Designed the user profile flow from scratch — the functionality didn't exist, so only 4% of profiles were filled and users couldn't be segmented by asset class or market. Editable fields with exchange-side approval under the hood, plus an onboarding modal for existing users, took completion to 57% in the first month and 82% the following quarter.
- Audited the legacy design system, rethought and wrote down its foundations to cover mobile as well as web, reworked the token architecture, and am rebuilding the system end to end with Claude Code and the Figma CLI: 17 components published, more in progress. All of it in two months, alongside product work.
- Everything is machine-readable — tokens, rules, components, docs, and agent context — usable for prototyping right away and exported to Storybook and a Git repo.
- Also shipped: a SPOT/SWAP profit calculator, transaction report export, analyst report uploads, and a unified trading-results widget.

Product Designer — WYA Venue Operations Center, Where You At · London, remote · Nov 2023 – Jun 2024

- Designed the B2B2C side of the venue operations product; built an interactive UI kit that roughly doubled design-to-development speed.
- Connected the product's two sides: designed event publishing from the venue's operations web app straight into the visitor mobile app, where guests invite friends and share their plans.
- Shipped the tablet version, opening a market segment the product hadn't reached, and designed crowd management through push notifications.

Product Designer — Swordfish Security · AppSec.Track & AppSec.Hub · Moscow, remote · Nov 2021 – Feb 2024

- Took AppSec.Track from zero to MVP in four months. First sale went to one of Russia's largest banks; 10+ deployments followed in the first year.
- Built the Figma component library that cut design and development time up to 3×.
- On AppSec.Hub, rebuilt the interface architecture and core flows: user paths shortened 3–5×, and advanced filtering sharply cut vulnerability triage time for SAST engineers.

Freelance Product Designer · May 2019 – present

- Ongoing side practice: a content-lifecycle platform for Russia's largest media holding (under NDA), an e-commerce redesign for Aibolit that grew order values 2–10×, and a recruitment portal for NLMK.

SKILLS

Design systems & token architecture · Figma (variables, slots, modes, Plugin API) · Claude Code, MCP, agent context engineering · Prototyping · UX research · Storybook · Webflow · Git · Jira

EDUCATION

BA Linguistics — Moscow Open University of Nataly Nesterova, 2004

Bang Bang Education — UI/UX Digital Product Designer, 2021 · Web Designer, 2020
