Kiosk

Interactive Touchscreen Kiosk

The touchscreen kiosk is a 43 inch interactive display that offers a smarter way to navigate the office.

The kiosk can run different modules to help visitors sign in, employees book desks or rooms, and anyone view the office floor plan. It can also serve as a digital display for announcements, updates, or custom content, just like a smart TV for your workplace.

Install it on a wall or a stand, wherever it works best for your space and your team.
