Touchscreen Kiosk

PRODUCT OVERVIEW

The Touchscreen Kiosk is a 43 inch interactive display designed to simplify wayfinding and navigation within your office spaces.

Through an interactive map, it provides real time visibility into desk and meeting room availability, along with space type, amenities, and precise location. Employees can also see where their colleagues are located in the office, making it easier to find and coordinate with their team.

The kiosk can be wall mounted or installed on a stand, depending on your workspace layout, and serves as a central reference point for navigating the office.

Navigate the Workplace More Easily

The kiosk gives employees and visitors instant access to an interactive floor plan of your office, making it easy to find desks, meeting rooms, and common areas. Whether it's a regular workday or a first-time visit, navigating the space becomes faster and more intuitive.

Locate Colleagues at a Glance

The interactive map shows where colleagues are working across the office in real time. Employees can search for a specific person, see their location on the floor plan, and head over to join them, making it easy to find teammates on any given day.

Find the Space That Fits Your Needs

Employees can filter the interactive map by criteria such as room capacity, amenities, or space type to identify a desk or meeting room that matches their needs, rather than scanning the whole floor plan manually. This makes it easy to quickly narrow down options in a large or busy office.

Adapt to Any Workspace Layout

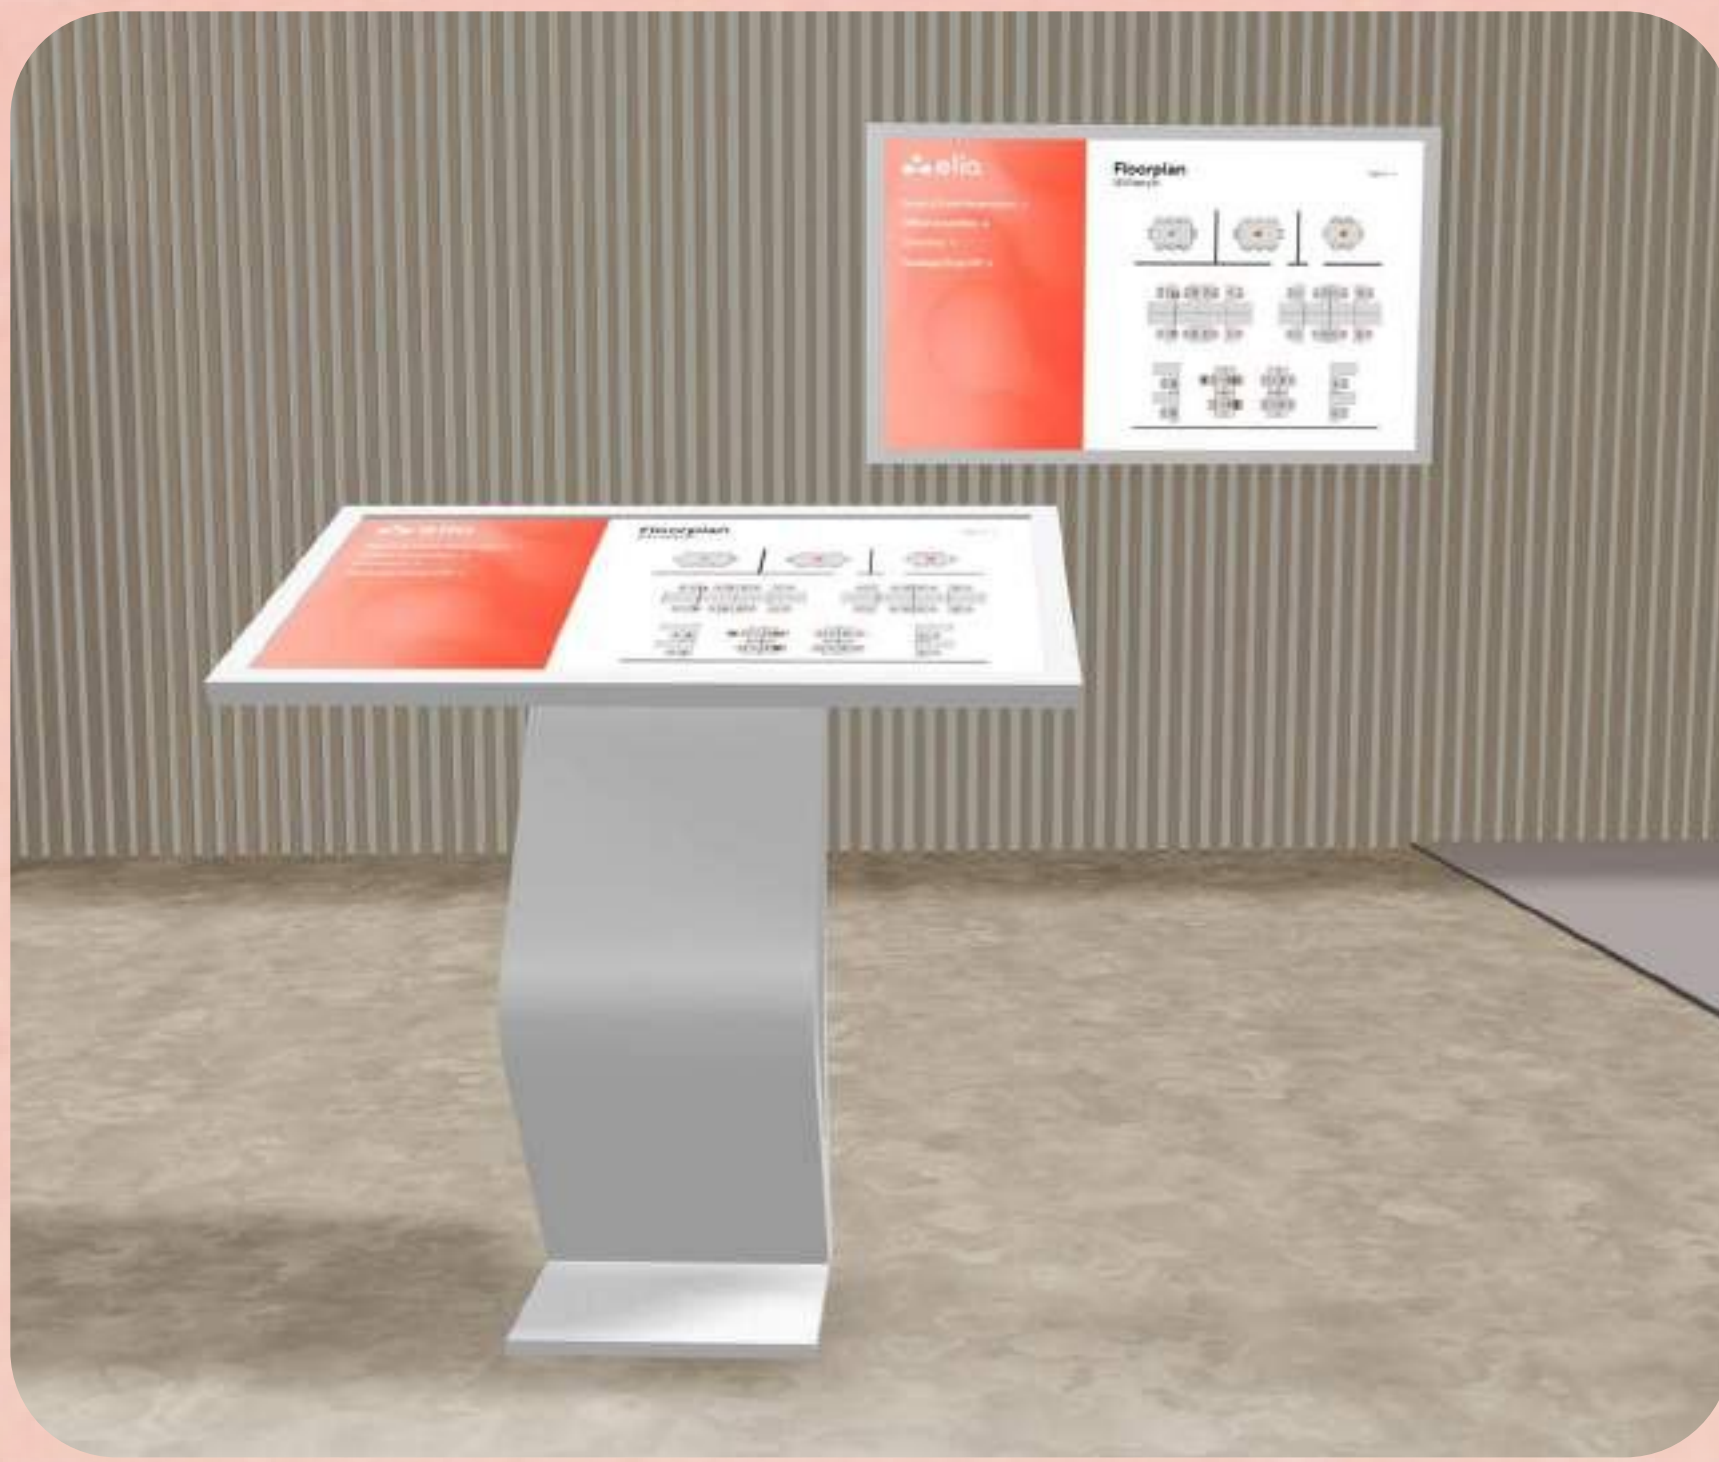

The kiosk can be wall mounted or installed on a floor stand, depending on where it best serves employees and visitors, such as near an entrance, a busy hallway, or a central common area. This flexibility makes it easy to place the kiosk wherever it will be most useful.

Touchscreen Kiosk

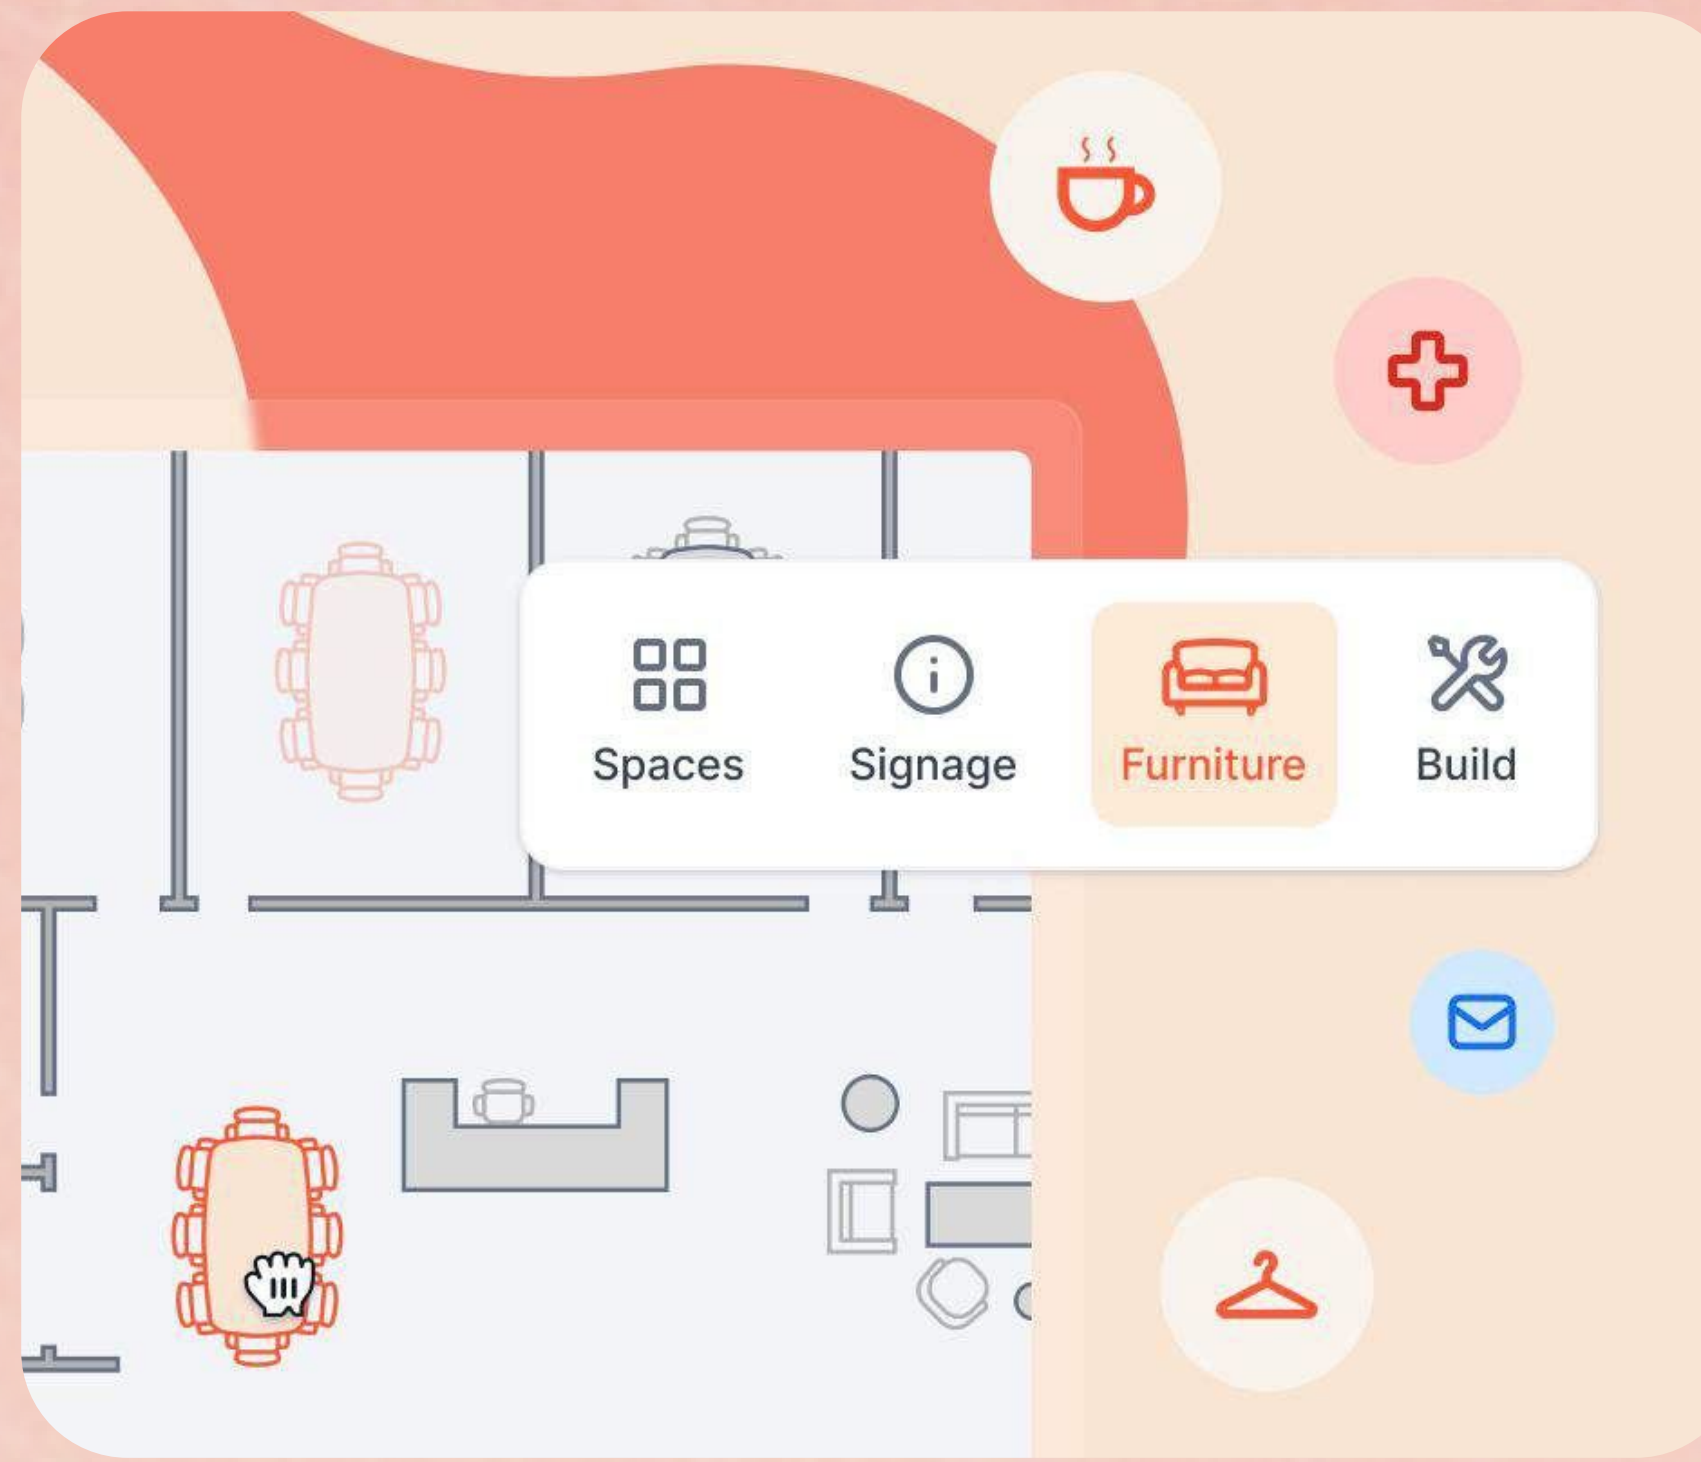

HOW IT WORKS

01

Choose Wall or Stand Installation

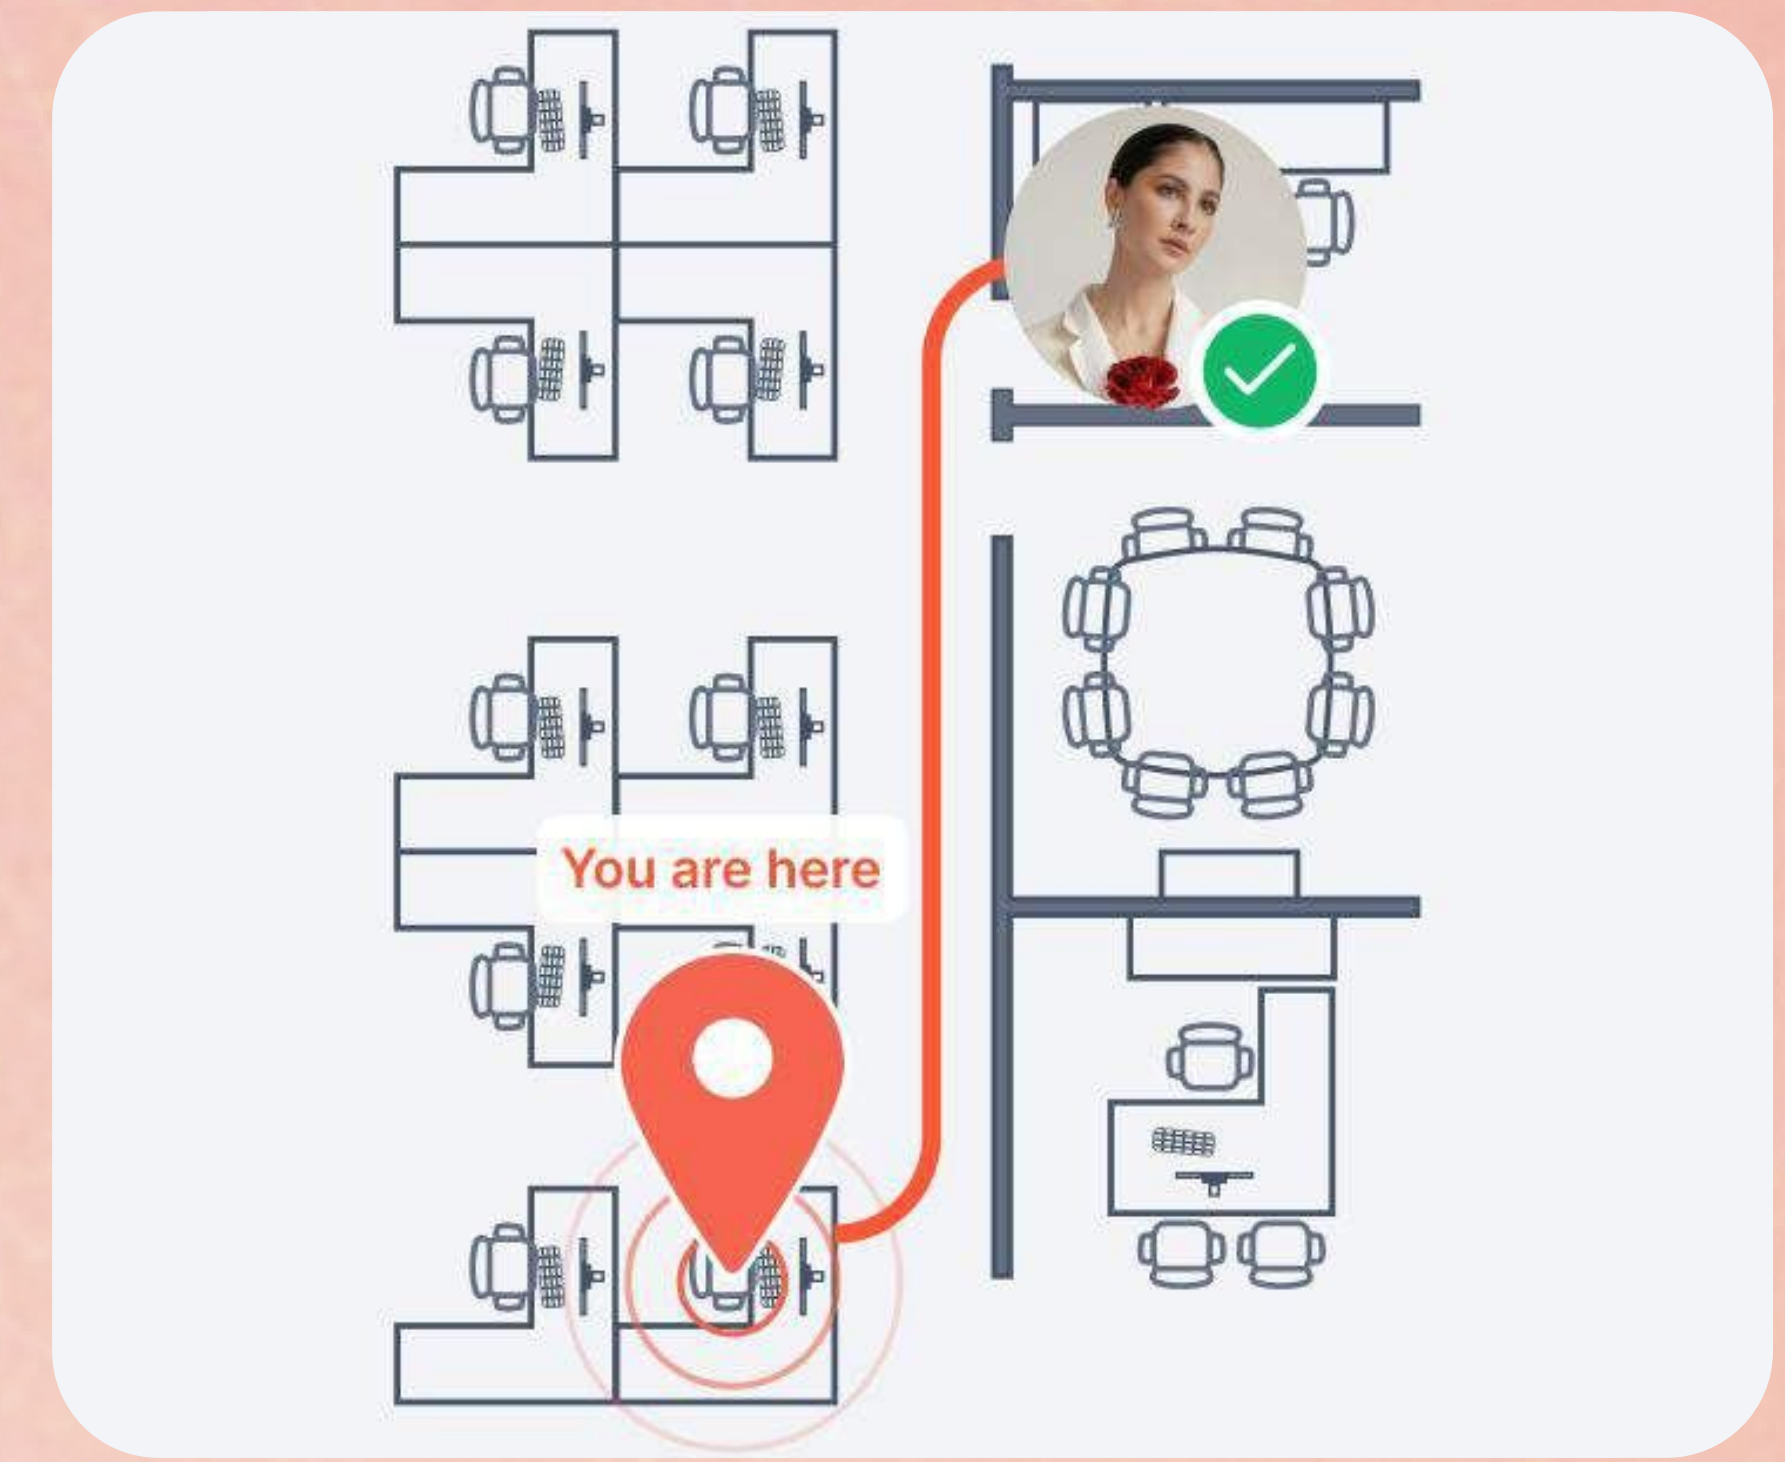

Start by choosing how you want to install the kiosk. It can be wall-mounted to save space or placed on a sleek floor stand for more flexible positioning within your office.

02

Configure the interactive floor plan

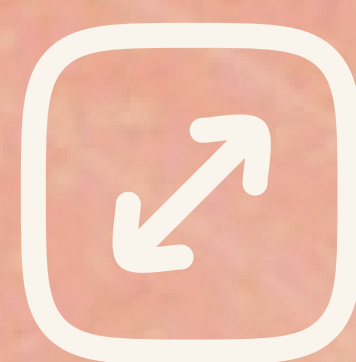

Set up the floor plan with your office layout, including desks, meeting rooms, and common areas, so employees and visitors always have an accurate, real-time map of the space.

03

Navigate the workplace easily

Once set up, employees and visitors can use the kiosk to find the right space or locate a colleague in seconds, making it easy to navigate the workplace on any given day.

Immersive 43-Inch WLED Display

The expansive 43-inch screen boasts a sharp 1920x1080 resolution and a 16:9 aspect ratio, providing vibrant, easy-to-read visuals for wayfinding and visitor announcements.

Versatile Mounting Options

Featuring a standard 400x400mm VESA mount, the 43-inch display can be securely affixed directly to a wall to save floor space or attached to its freestanding base for high-traffic lobbies.

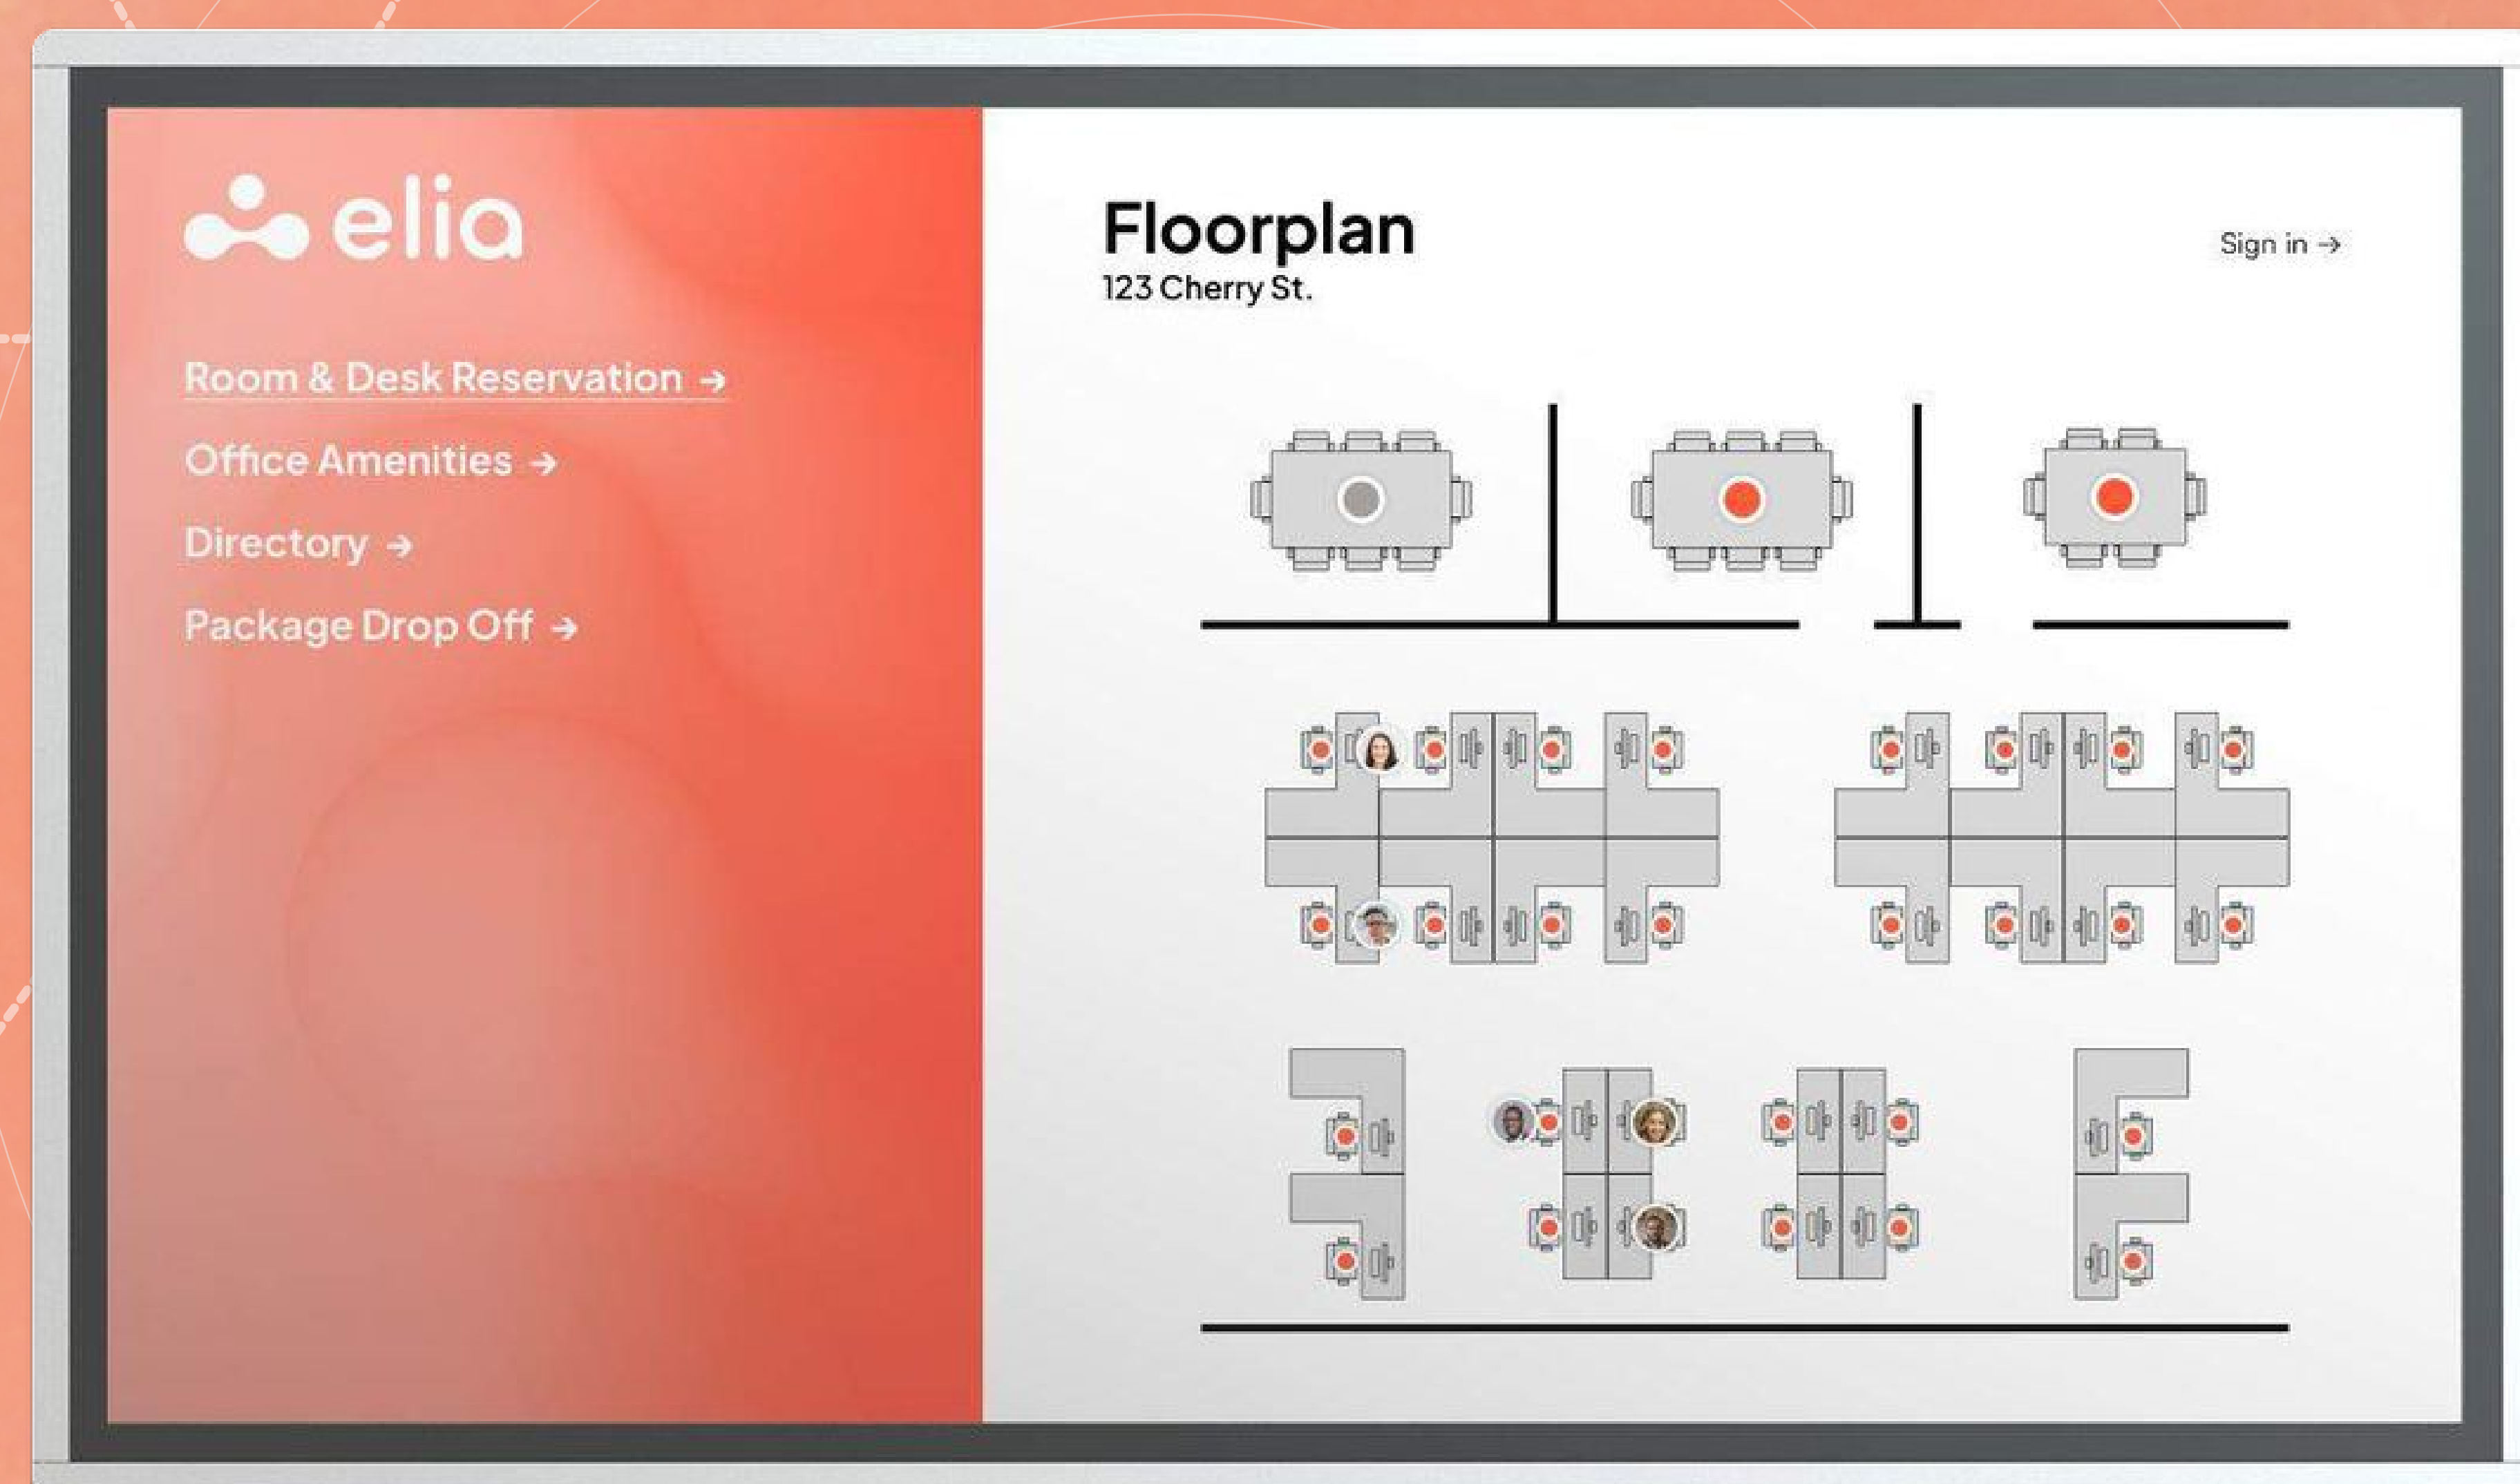

Highly Responsive Infrared Touch

Featuring advanced infrared touch technology, the display supports 6 to 10 simultaneous touch points with a rapid 5-18ms response time, allowing for intuitive map zooming and effortless interactive writing.

Energy-Efficient Operation

The kiosk draws just 55W during active use and drops below 8W in standby mode, operating reliably in a wide range of standard indoor environments from 0°C to 50°C.

Typical Use Cases

NAVIGATE THE WORKPLACE EASILY

Large or unfamiliar offices make it hard for employees and visitors to quickly find their way around. The Touchscreen Kiosk provides an interactive floor plan showing desks, meeting rooms, and common areas, so anyone can orient themselves at a glance instead of wandering the floor.

For example, a new employee or a first-time visitor can walk up to the kiosk near the entrance, look up the room they're heading to, and get clear directions to it in seconds, without needing to ask anyone for help.

FIND THE SPACE THAT FITS YOUR NEEDS

Not every desk or room suits every task. The kiosk lets employees filter the floor plan by criteria such as capacity, amenities, or space type, so they can identify a space that matches what they actually need rather than scanning the entire office manually.

For example, someone looking for a quiet room for a two-person call can filter for small meeting rooms with video conferencing equipment and immediately see which ones are available nearby.

LOCATE A COLLEAGUE IN THE OFFICE

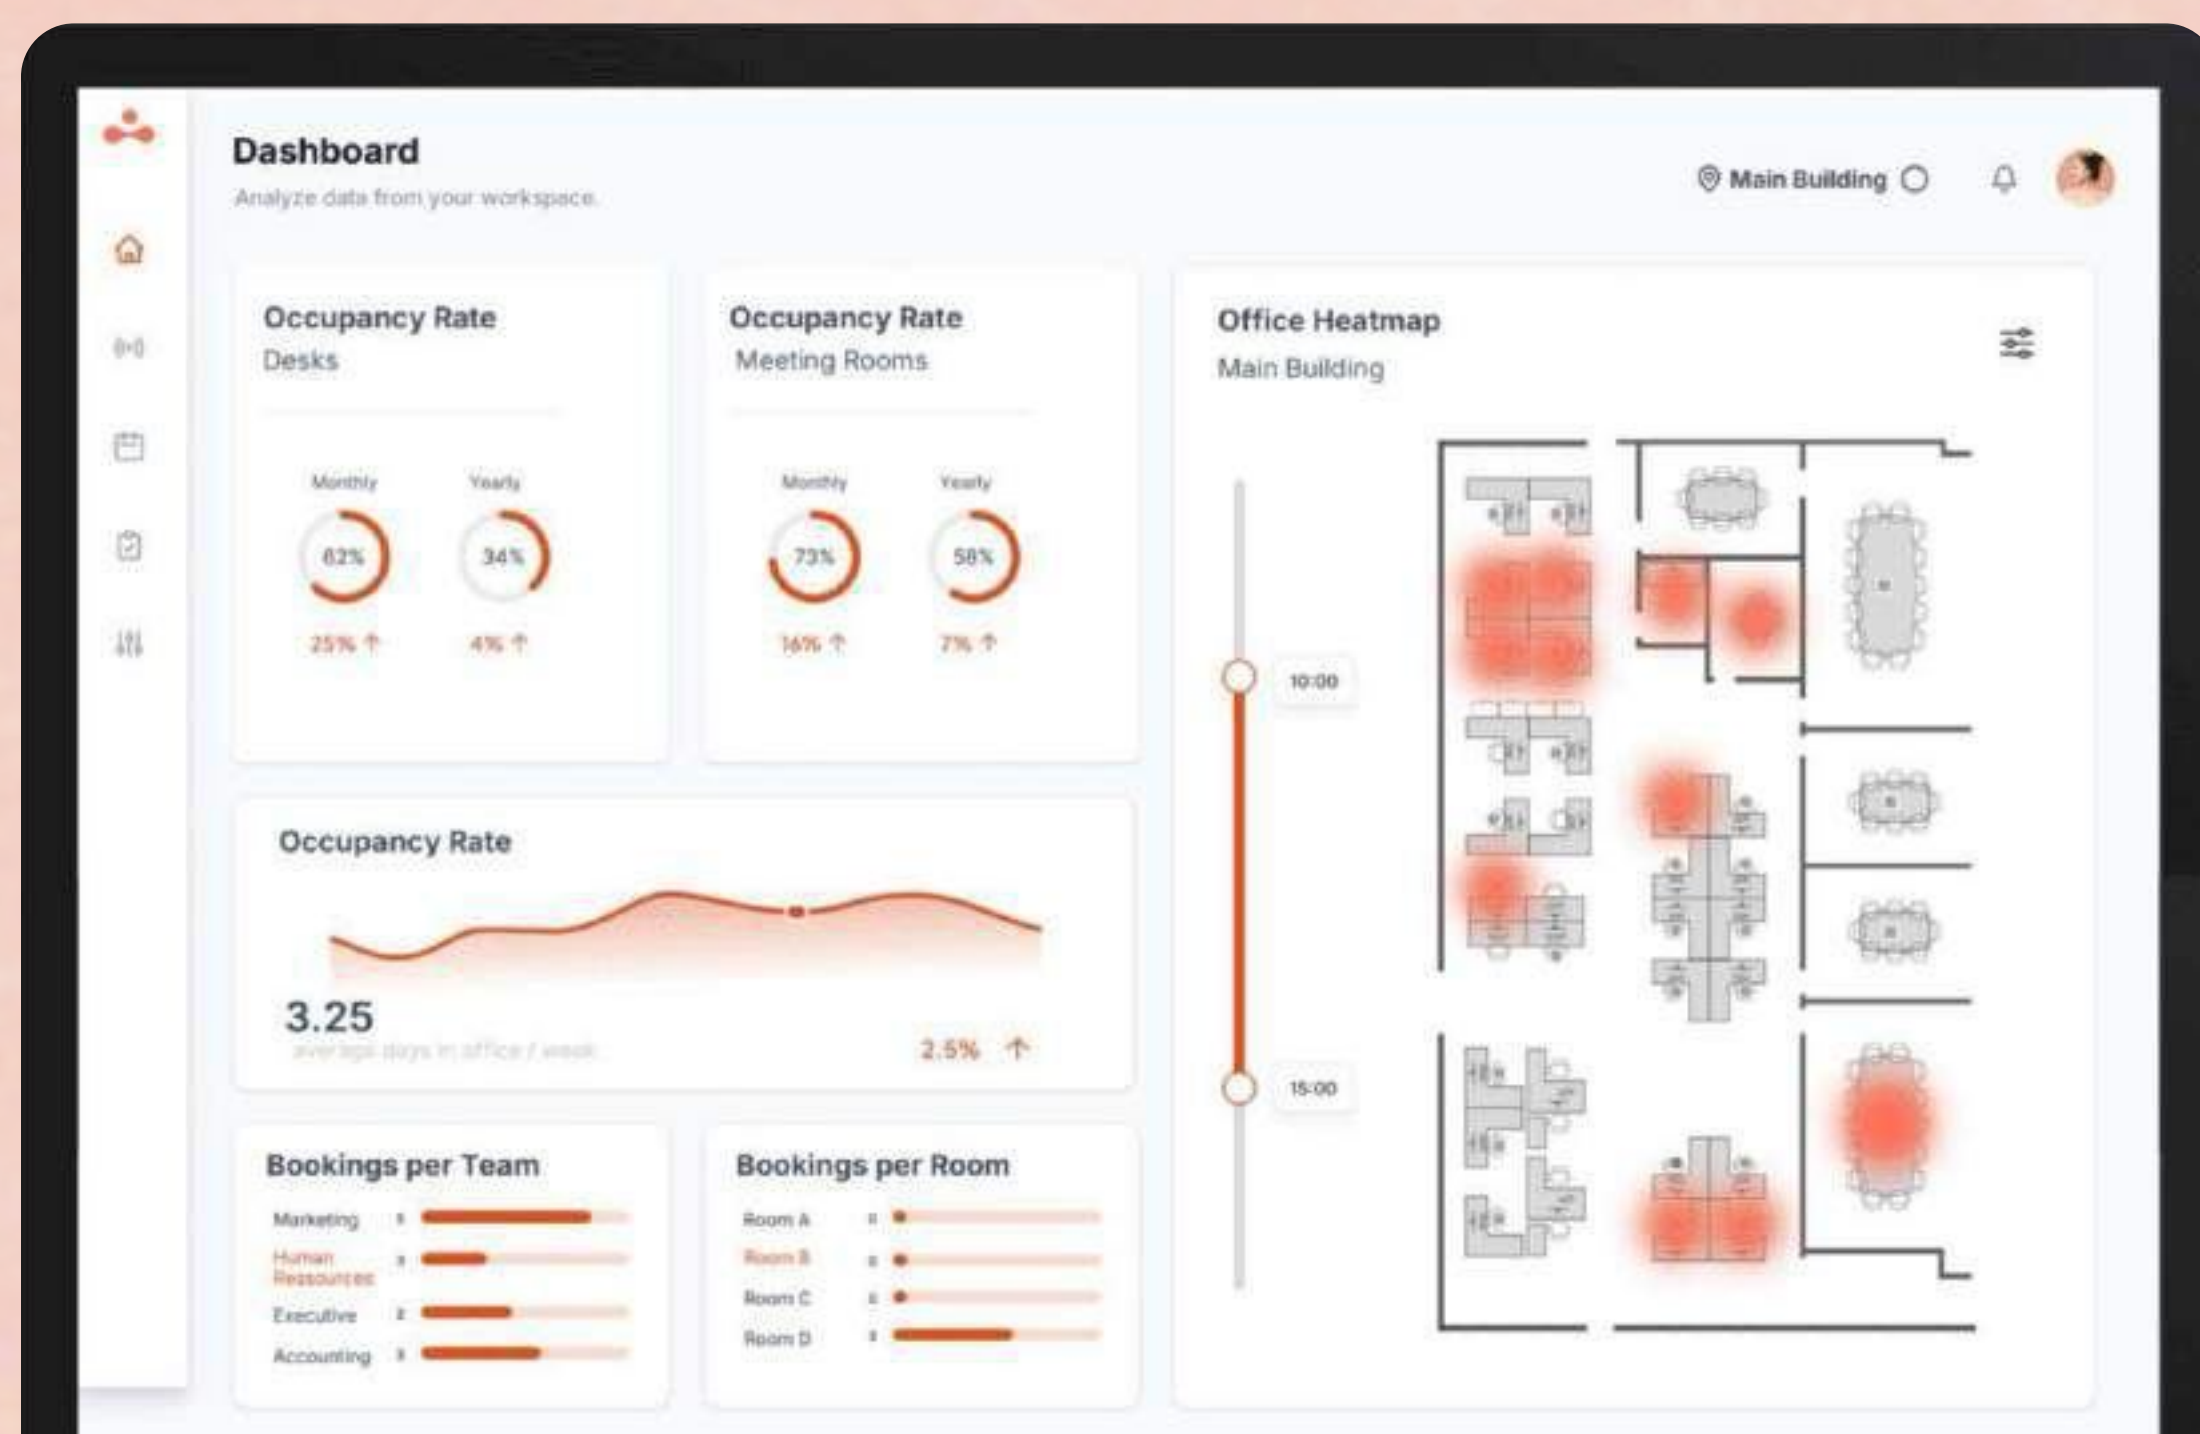

In a hybrid or flexible-seating environment, knowing who's in the office on a given day, and where, isn't always obvious. The kiosk's interactive map shows where colleagues are currently working, making it easy to find and join them.

For example, an employee arriving for an informal catch-up can search for a teammate's name on the kiosk, see their current desk location on the map, and head over directly instead of messaging back and forth to coordinate.

ADAPTS TO ANY WORKSPACE LAYOUT

Every office has different traffic patterns and physical constraints. The kiosk can be wall mounted to save space or placed on a floor stand for more flexible positioning, so it can be located wherever it will be most useful.

A company with a narrow lobby might wall-mount the kiosk near the entrance, while a company with an open floor plan might use a floor stand to place it at a central junction between departments.
