## STINAR SLS-500PL LAVATORY SERVICE TRUCK

The Stinar SLS-500 lavatory service truck features a waste tank with a 600 gal (2271 L) capacity and rinse water tank capacity of 200 gal (757 L). Stainless steel constructed, arc-welded and leak tested, these tanks are no slouch. With features like internal safety baffles, corrosion resistant couplers, and level gauges, this tank covers all your needs.

Designed to service wide-bodied aircraft, and more than capable of servicing narrow bodies as well, the Stinar Lavatory Service Truck, model SLS-500 is the truck of choice used to remove lavatory waste and re-supply rinse water to an aircraft. With a Stinar-designed upfit, and all the power you need for pumping rinse water from the truck water tank up into the aircraft, this unit features a full array of components that pack a complete punch on the lavatory side of the ground support industry. With a number of OEM chassis options available, and designed with an open or closed dumping system, the fully winterized SLS-500 should be the next truck in your ground support lineup.
