

Arts and Humanities at Minerva: Graduate Outcomes

Contact Information
outreach@minerva.edu

The Arts & Humanities College at Minerva is for students who want to understand how human thought, creativity, and culture shape the world around us. Students learn to interpret art and literature, analyze historical forces, examine ethical systems, and communicate across disciplines and contexts. Every concept is tested in the real world, across seven global cities, through coursework designed to move between theory and practice from day one.

Across five graduating classes from M19 to M23, Minerva has tracked outcomes for more than 100 Arts & Humanities graduates.

82%

of AH graduates* are employed in various industries within six months of graduation

18%

of AH graduates* are pursuing advanced degrees within six months of graduation

*Data collected from 104 AH college graduates from 2019 to 2023

Concentration	Top Industry
Arts & Literature	Education
Historical Forces	Business and Education
Philosophy, Ethics, and the Law	Business
Interpretation and Meaning	Business and Education
Design Across Humanities	Various
Self-Created Concentration	Business and Grad School

Concentrations after Minerva

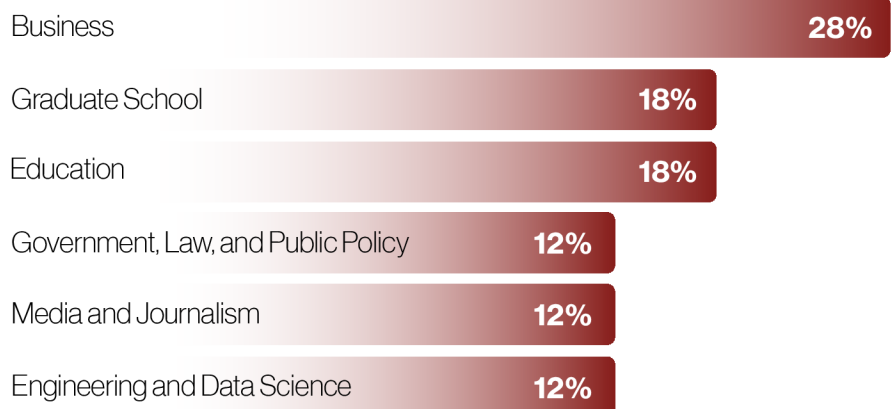

In their second year, Minerva students select a concentration, a focused area of study that deepens their analytical toolkit in a specific domain.

Each of the four concentrations in the Social Science college open distinct pathways for careers. This table shows how each concentration maps to real-world outcomes across the graduating classes.

Industries Where AH Majors Thrive

Arts & Humanities graduates demonstrate versatility across industries. The curriculum builds analytical, ethical, and communication skills that transfer across fields.

Graduate School Pathways

All Minerva students complete **an independent Capstone project** in their final year, producing original research or applied work that sets them apart in competitive graduate school admissions processes.

Working in Business

AH graduates bring the ability to construct arguments, read context, and communicate with precision across audiences – skills that translate directly into marketing, product management, operations, and strategy roles.

Working in Education

Minerva's program is built around learning through small seminars, student-led discussions, and an independent Capstone. Many AH graduates go on to shape how others learn.

Working in Government, Law, and Public Policy

The AH College trains students to engage seriously with ethics, law, and the structures of power, producing graduates who work across policy, legal writing, and political analysis.

Working in Media and Journalism

The AH curriculum develops exactly what media demands: the ability to find the story in complex material and communicate it clearly across formats and audiences.

Working in Engineering and Data Science

Most AH graduates in this sector are CS double majors, combining technical skills with training in logical reasoning, ethics, and human-centered thinking. They work as software engineers, data scientists, interactive developers, and applied scientists.
