

Implement Salesforce Shield 80% faster

Accelerate and validate your implementation of Salesforce Shield Platform Encryption (encryption at rest).

Working with Salesforce Shield Platform Encryption?

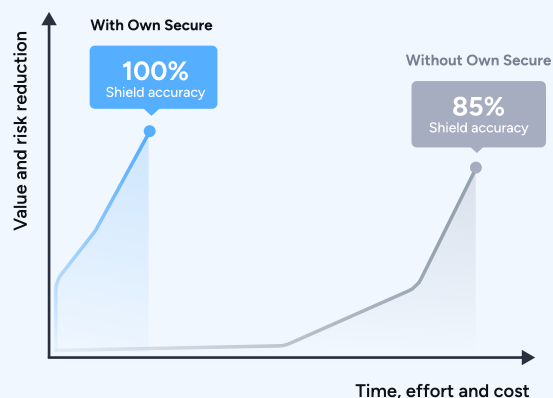

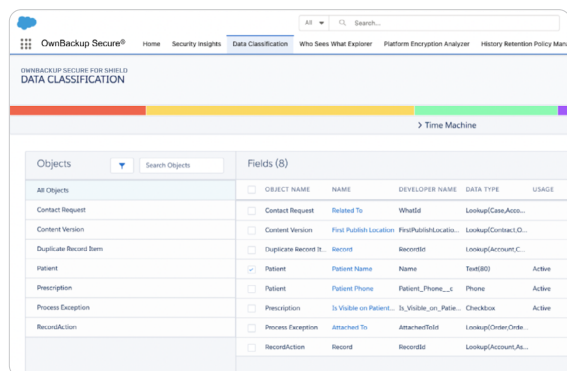

Real-time analysis

Instantly see why encryption is blocked, the downstream business impacts, and what needs to be resolved down to the field level.

Classify sensitive information with ease

Inform your encryption priorities by identifying where sensitive information exists in Salesforce and applying classification categories.

Prove compliance with industry regulations

Deliver real-time, evidence-based reports and audits to satisfy internal policies and external regulations.

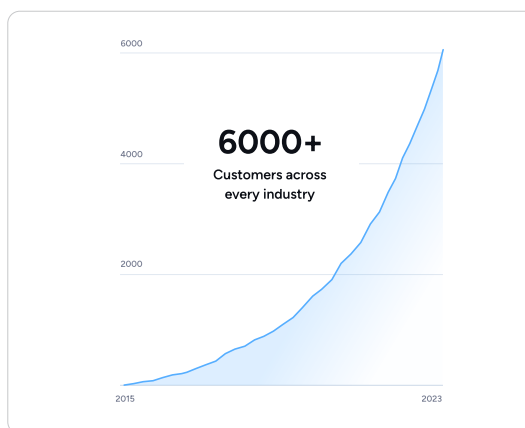

Own, the leading independent SaaS data platform

500+ five-star reviews (98%), 5x more than the next closest competitor

\$500M in funding including Salesforce Ventures and Insight Partners

Don't do encryption without it!

I've done encryption the hard way with giant confusing spreadsheets and tons of troubleshooting - and then with Own Secure for Shield. The amount of time savings alone makes this product worth adding - but the data classification, the change history, sorting, filtering and search features, also makes this a win-win for Salesforce admins and for compliance / oversight teams.

Cut months off your implementation time!

Prior to using Own, my team had been unable to gain traction on Shield Platform Encryption for over a year. If you have any significant amount of apex custom code with SOQLs and want to encrypt your data, this package will cut months off your implementation time.

Intuitive, simple to use, powerful!

Never had to look at the documentation as it is that easy to use. However, don't let the simplicity fool you. It is a very powerful tool. I spent about 4 weeks trying to classify and evaluate/encrypt 3000+ fields in our org (before Own). Once I installed this tool, I was able to evaluate and encrypt, start to finish, in one day.
