OUTSIDE MOUNT ROLLER SHADE
MEASUREMENT GUIDE

How to measure for Outside Mount Roller Shades

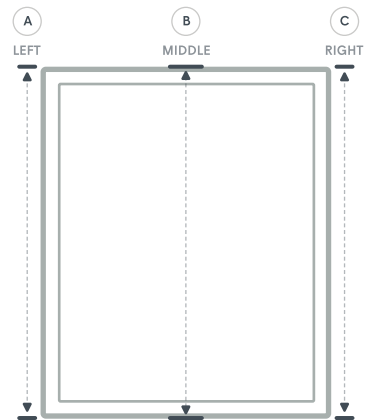

1. Rounding up to the nearest 1/8 of an inch, measure the outside edges of the window frame width in 3 places and record your measurements below.

To ensure your window will be fully covered, we recommend adding about 2 inches total to the widths you measure. After accounting for your desired additional width, record the total measurements below.

2. Rounding up to the nearest 1/8 of an inch, measure the outside edges of the window frame length in 3 places and record your measurements below.

To ensure your window will be fully covered once mounted on the wall, we recommend adding 5 inches to the total height of your window. Determine your desired additional mounting height, then record it below.

DESIGNER RECOMMENDED MOUNTING HEIGHT
BY MOUNTING LOCATION:

If mounting on wall above window*:

5" above window trim recommended

If mounting on a door:

3" above window recommended

If mounting on window trim:

0" of additional mounting height are required but

3" of mounting surface will be needed on the trim itself.

***Please Note:** If you select Back Roll Direction and are mounting on drywall above the window, your window trim's projection should be as minimal as possible. When Back Roll Direction is selected, the shade falls off the back making it flush with the mounting surface. Significantly deep window trim will push the shade forward and compromise the shade's functionality.

***Valance Width:** This is the total finished width along the top of your shade, designed to be the perfect fit when installing.

****Shade Width:** This is the width of the shade material itself, made a bit more narrow than your full width measurement so the shade can roll open and closed seamlessly.

Outside Mount Roman Shades & Woven Woods Worksheet

1 Room Name/Window Label:

Width	A. TOP	B. MIDDLE	C. BOTTOM	Record Mounting Height:
Length	A. LEFT	B. CENTER	C. RIGHT
