A Legacy of Building Trailers

For over 75 years, Clement Industries has built durable, purpose-driven trailers designed for the demands of real-world hauling. From 1950 to today, our commitment to quality and practical engineering continues to drive every trailer we build.

Built by Hand. Refined by Time.

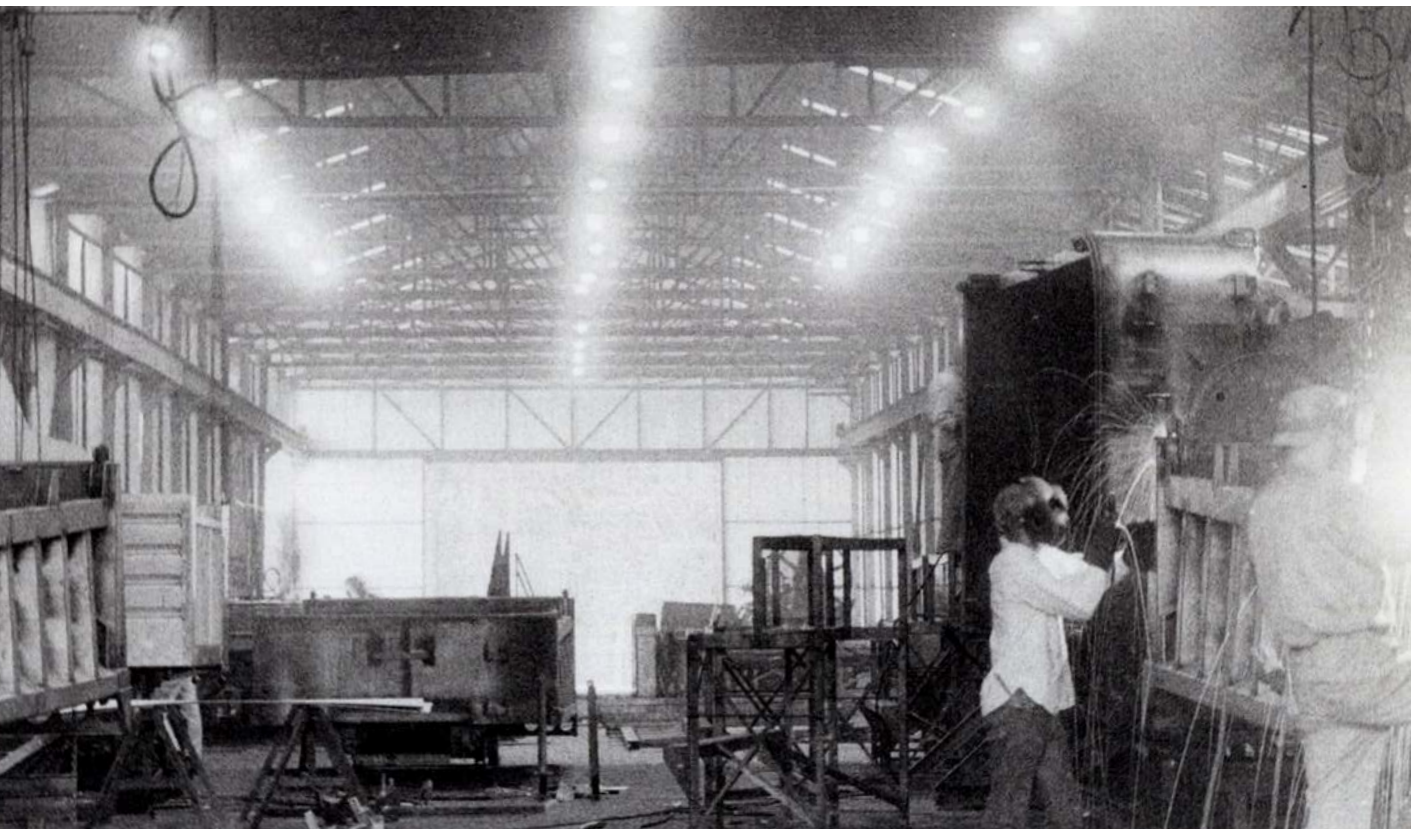

What began in a small shop in Minden, Louisiana has grown into decades of trailer manufacturing shaped by hard work, practical engineering, and continuous improvement. From the earliest steel dump bodies to today's advanced trailer systems, Clement's foundation has always been built on craftsmanship.

Every generation of Clement trailers reflects lessons learned in the field - refining designs, strengthening performance, and improving durability to meet the demands of changing industries.

75 Years of Excellence

From hand-built beginnings to modern manufacturing, the commitment to building dependable trailers remains unchanged.

Transform Your Hauling

with our expansive line
of trailers

OUR TRAILERS

Built for the Work Ahead.

MONSTAR

Scrap & Demolition

Description

The MonStar is built for high-capacity hauling with up to 99 cubic yards of capacity, combining a frameless half-round design and AR450 steel construction for strength, stability, and payload efficiency in demanding high-cube applications.

ALLSTAR GT

Scrap & Demolition

Description

The AllStar GT is engineered for scrap and demolition hauling, delivering high-capacity performance, long service life, and reduced operating weight to maximize payload and efficiency in demanding applications.

SCRAPSTAR

Scrap & Demolition

Description

The Clement ScrapStar delivers up to 62 cubic yards of capacity and is built for rugged scrap and demolition applications, combining dependable durability and efficient hauling to help maximize productivity and profitability.

OUR TRAILERS

Built for the Work Ahead.

ROCKSTAR

Construction

Description

The RockStar is built to handle demanding aggregate and rock-hauling applications, with a rugged design engineered for heavy loads, efficient unloading, and dependable performance in tough working conditions.

TEXSTAR

Construction

Description

The TexStar is engineered for the demanding conditions of the Texas rock-hauling market, featuring an all-AR450 body and frameless half-round design built to maximize durability, payload, and dependable performance.

SANDSTAR

Construction

Description

The Clement SandStar is a lightweight end dump trailer built for sand and gravel hauling, combining durable construction with a weight-conscious design to maximize payload and improve hauling efficiency.

ALLSTAR SG

Construction

Description

The Clement AllStar SG is engineered for sand and gravel hauling, featuring an AR450 steel body and elliptical design built to maximize payload, improve material flow, and deliver the durability and stability needed for demanding daily operation.

ALLSTAR MT

Construction

Description

The AllStar MT is a highly configurable multi-material trailer built with an all-AR450 steel body and available in frame-type, quarter-frame, or frameless designs. Engineered to balance payload, durability, and operational flexibility to match your hauling needs.

HILBILT MONGOOSE

Construction

Description

The Mongoose 2 is engineered for demanding construction and demolition hauling, combining AR450 steel construction with a weight-conscious design to maximize durability, payload, and dependable performance in tough applications.

OUR TRAILERS

Built for the Work Ahead.

HAULSTAR Construction

Description

The HaulStar is built for strength, durability, and dependable performance, offering a lightweight design with steel side sheets for extended service life and long-term value.

HILBILT XP Construction

Description

The XP Series is designed to increase payload capacity through a uni-beam construction that helps reduce the overall weight of the trailer. Available in steel or aluminum.

PAVESTAR 2 Construction

Description

The PaveStar 2 is built for modern paving operations, featuring an elliptical body design for cleaner transfer, reduced cleanup, and increased payload. Constructed with hardened steel and lightweight aluminum for durability and efficiency.

CLEMENT SCRAPSTAR

OUR TRAILERS

Built for the Work Ahead.

ROLLSTAR™

Construction

Description

The RollStar Trunnion Mount Roll-Off features a front-mounted vertical hoist design for direct lifting power, smoother operation, and improved structural stability. Built for dependable performance in demanding roll-off applications.

ROLLSTAR BRIDGER™

Construction

Description

The RollStar Bridger Roll-Off sets itself apart with a frameless design that cuts weight and increases payload capacity. Proven in the field for decades, it delivers rugged performance and dependable hauling for demanding roll-off operations.

ROLLSTAR 2-BOX™

Construction

Description

The RollStar 2-Box is engineered to simplify roll-off operations with a safer, more efficient design built for long-distance hauling between plant sites and demanding destination points.

ALUMISTAR SS

Construction

Description

The AlumiStar SS combines lightweight aluminum construction with a flexible design to deliver dependable performance, reduced tare weight, and lasting durability. Configured to fit your operation for efficient hauling across a wide range of applications.

ALUMISTAR VDW

Construction

Description

The AlumiStar VDW features a vertical double-wall aluminum design for superior sidewall strength, impact resistance, and durability. Built to handle demanding loads while maximizing payload and maintaining efficient unloading.

ALUMISTAR LF

Construction/Refuse

Description

The AlumiStar LF combines lightweight aluminum construction with live floor unloading for safe, controlled material movement across multiple applications. Built for mixed-use hauling, it delivers versatile performance and efficient unloading without tipping.
