

INTEGRATION
CONTROLS

How We Work with Architects

At Integration Controls, we believe that technology should complement great design—not complicate it. By collaborating with architects early in the planning process, we ensure that technology is seamlessly integrated into the design of a home. From lighting and automation to entire space audio and entertainment, we create solutions that enhance the user experience without disrupting aesthetics.

Keeping You and Your Clients Top of Mind

- **Future-Ready Design**

We incorporate modern home technology with simple-to-use features from the beginning, ensuring a design is functional and can evolve.

- **Lighting & Technology Planning**

We supplement architectural plans with thoughtful lighting and home technology design services, ensuring technology enhances, rather than interrupts, the vision.

- **Education & Industry Support**

We provide learning and continuing education opportunities to keep architects informed about the latest in smart home technology and integration.

- **Clearer Project Scope**

By working closely with architects and homeowners, we define a clear technology plan early, making project estimates more accurate and reducing costly additions or changes.

Let's Build Smarter, Together

We partner with you to create environments where technology enhances both form and function. Let's collaborate to ensure your clients experience smarter spaces.
