

# Vectra AI SOC Operations Training Syllabus

January, 2025

## Instructor information

Instructor	Email	Role
TBD	TBD	Professional Services Trainer

## General information

### Description

This coursework equips Security Operations Center (SOC) professionals with the knowledge and skills needed to utilize the Vectra AI platform effectively in daily operations. Attendees will learn basic system architecture, fundamentals of prioritization of entities, how to analyze and assess detections, API usage, Protocols, threat hunting and identify avenues to integrate the Vectra AI platform into standing workflows. Prerequisites include fully deployed Vectra environment, basic IT knowledge, cybersecurity fundamentals, and proficiency in networking and system administration. The course emphasizes practical exercises, collaboration, and continuous learning.

## Expectations and Prerequisites

To make the most of this training content, attendees should meet the following expectations and prerequisites:

- Basic IT Knowledge:
  - Attendees should have a foundational understanding of IT concepts, including networking fundamentals, protocols, security, and system administration.
- Cybersecurity Fundamentals:
  - A grasp of cybersecurity principles is recommended. Attendees should understand concepts like threat detection, incident response, and risk management.
  - Knowledge of common attack vectors (e.g., phishing, malware, insider threats) is helpful.
- Networking Proficiency:
  - Attendees should be comfortable with network architecture and protocols.
  - Understanding network traffic flow, segmentation, and communication patterns will enhance their learning experience.
- Security Tools Familiarity:
  - Prior exposure to security tools (e.g., SIEMs, IDS/IPS, firewalls) will be advantageous.
  - Understanding how these tools contribute to threat detection and prevention is valuable.
- Critical Thinking and Problem-Solving:
  - Attendees should possess analytical skills to interpret alerts, investigate incidents, and troubleshoot issues.
  - Logical reasoning and the ability to connect the dots are crucial.
- Documentation Discipline:
  - A willingness to create and maintain thorough documentation is essential.
  - Attendees should be comfortable documenting deployment steps, configurations, and troubleshooting procedures.
- Collaboration and Communication:
  - Attendees will benefit from collaborating with colleagues and subject matter experts.
  - Effective communication skills are necessary for escalations and knowledge sharing.
- Resourcefulness:
  - Attendees should proactively seek out additional resources beyond the coursework.
  - Utilize stored documentation, engage with community forums, and explore online resources.

## Required attendee materials

- Computer or Device:
  - Ensure you have access to a reliable computer or laptop with internet connectivity.
  - Make sure your device is compatible with Microsoft Teams.
  - Test connectivity with required internal network resources and lab environment(s).
- Internet Connection:
  - A stable and reasonably fast internet connection is essential for participating in virtual sessions.
- Microsoft Teams:
  - Online training will be conducted through Microsoft Teams. Ensure that necessary software is installed and up to date.
  - Familiarize yourself with Teams features like chat, video calls, and screen sharing.
- Vectra AI Documentation:
  - Review Vectra's official documentation (found on [support.vectra.ai](https://support.vectra.ai)) to understand the platform and its features.
  - Access the REST API guides for any API-related tasks.
- Time Management:
  - Allocate time for attending virtual sessions, setting up your lab, and practicing exercises.
  - Remember to actively participate, ask questions, and explore the Vectra AI platform during the coursework.

Coursework

Sessions & Topics	Exercises
<b>Session 1</b> <b>Duration: 4 Hours</b> <ul style="list-style-type: none"><li>• <b>Introduction to Vectra AI</b></li><li>• <b>HostID</b></li><li>• <b>Quad UX</b></li><li>• <b>Vectra API</b></li></ul>	<b>Introduction to Vectra AI</b> <ul style="list-style-type: none"><li>○ Overview of Vectra AI's role in threat detection and response.</li><li>○ Understanding the platform architecture and components.</li><li>○ Familiarization with Vectra AI's documentation and support</li></ul> <b>HostID</b> <ul style="list-style-type: none"><li>○ Introduction to Host ID and its importance</li><li>○ Familiarize with how Vectra AI platform utilizes</li></ul> <b>Quad UX</b> <ul style="list-style-type: none"><li>○ Overview of the functionality of Quad UI</li><li>○ Familiarize the analysts with each page of the UI</li><li>○ Discuss use cases and purpose of each page</li><li>○ Host Scoring</li></ul> <b>Vectra API</b> <ul style="list-style-type: none"><li>○ Exploring Vectra's REST API capabilities.</li><li>○ Leveraging standard APIs for data retrieval, alert management, and system health checks.</li><li>○ Utilizing health APIs for monitoring platform performance and stability.</li></ul>

Sessions & Topics	Exercises
<b>Session 2</b>	<b>Triage</b>
<b>Duration: 4 hours</b>	<ul style="list-style-type: none"><li>○ Introduction to Triage</li><li>○ Familiarize the analysts with Triage</li><li>○ Demonstrate Triage in UI</li></ul>
<ul style="list-style-type: none"><li>• <b>Triage</b></li><li>• <b>Tags and Notes</b></li><li>• <b>Assignments</b></li><li>• <b>Recall</b></li><li>• <b>Integrations and API</b></li></ul>	<b>Tags and Notes</b> <ul style="list-style-type: none"><li>○ Introduction to Tags and Notes</li><li>○ Familiarize the analysts with Tags and Notes</li><li>○ Demonstrate Tags and Notes in UI</li></ul>
	<b>Assignments</b> <ul style="list-style-type: none"><li>○ Introduction of Vectra User Assignments</li><li>○ Familiarize the analysts with Vectra User Assignments</li><li>○ Demonstrate Assignments in UI</li></ul>
	<b>Recall</b> <ul style="list-style-type: none"><li>○ Introduction of Recall</li><li>○ Familiarize the analysts with Recall</li><li>○ Demonstrate Recall</li></ul>
	<b>Integrations and API</b> <ul style="list-style-type: none"><li>○ Introduction to Vectra's REST API and capabilities</li><li>○ Familiarize the analysts with Vectra REST API</li><li>○ Leveraging APIs for data retrieval, alert management, and system health checks</li><li>○ Utilizing health APIs for monitoring platform performance and stability</li><li>○ Demonstrate Vectra REST API</li></ul>

Sessions & Topics	Exercises
<b>Session 3</b>	<b>Detections</b>
<b>Duration: 4 hours</b>	
<ul style="list-style-type: none"><li>Detections</li></ul>	<ul style="list-style-type: none"><li>This session is a deeper dive into Vectra AI detections.</li><li>Discussions include<ul style="list-style-type: none"><li>- Meaning of the detections</li><li>- How to analyze</li><li>- What to consider for validation and/or remediation</li></ul></li><li>Command &amp; Control</li><li>Reconnaissance</li><li>Lateral Movement</li><li>Exfiltration</li><li>Botnet</li></ul>

Sessions & Topics	Exercises
Session 4	API WorkFlow
Duration: 4 hours	<ul style="list-style-type: none"><li>API Usage</li></ul>
<ul style="list-style-type: none"><li>Workflow Integration Discussion</li></ul>	Workflow Integration Discussion
<ul style="list-style-type: none"><li>Platform Consolidation</li></ul>	<ul style="list-style-type: none"><li>Current workflow</li><li>Identify workflow integration points</li></ul>
<ul style="list-style-type: none"><li>API WorkFlow</li></ul>	Platform Consolidation <ul style="list-style-type: none"><li>Assess Triage requirements</li><li>Create Groups and Triage Filters</li><li>Practice workflow integration points</li></ul>

Sessions & Topics

Session 5

Duration: 4 hours

- Investigate
- Network Protocols
- Threat Hunting
- PCAP Analysis

Exercises

Investigate

- Understanding how to investigate with recall
- Walkthrough of investigations in Recall

Introduction to Network Protocols/Network Traffic & Metadata

- Network Protocols in-depth
- Differentiating Network Traffic and metadata in Vectra Platform
- Metadata deep dive

Threat Hunting

- Threat hunting components and best-practices
- Threat hunting in Recall

PCAP Analysis

- Detection PCAP Analysis using Wireshark
- Detection PCAP Analysis using tcpdump
