

Introducing T3, the OS for Construction

Shift your construction operations
into view with T3 technology.

First, we helped contractors manage
their fleet and optimize their utilization.

Now, we're empowering construction
professionals to manage assets, people
and materials all with one technology
solution — T3.

T3 is a suite of apps powered by
telematics software and hardware.

Ditch your disconnected software
systems and tools, and do it all with
just T3.

See where your machines are, review
your staff's hours, monitor utilization,
assign work orders and more from your
mobile device or desktop computer.

Fleet
Track rented and owned fleet
utilization

Analytics
Build reports on utilization,
maintenance and more

CRM*
