

Density Coaster

Age Group: K-8
Child/Adult Ratio: 6 to 1
Take Away Artifact: No
Approximate Time: 1 hour
Divisions Covered: All

Materials:

8-10 Different Balls: Approximately 1"-2" (Golf, Steel, Ping Pong, Wooden, Gum, Bouncy, Wiffle, Styrofoam, Small Tennis), PVC pipe, gutter sections, landscaping pipe, wooden trim, birdseed bags, 2 x 4 blocks cardboard tubes, cardboard boxes, masking tape, and a stopwatch

Questions to Ask:

What is density? What is texture? What is friction? How do these characteristics affect movement?

Skills Required for Completion of Task:

Motor skills

- Bilateral upper extremity coordination
- Ability to manipulate small objects
- Hand-eye coordination
- Ability to grip objects
- Ability to stabilize objects/task

Process/Cognitive skills

- Ability to attend to task for greater than 5 minutes
- Follow multi-step directions
- Ability to sequence steps
- Ability to understand safety precaution
- Ability to organize or keep materials organized for task
- Ability to adjust to different workspace requirements

Social skills

- Ability to communicate and share equipment with peers/staff appropriately

K-8 Standards:

5.PS2: Motion and Stability: Forces and Interactions 1) Test the effects of balanced and unbalanced forces on the speed and direction of motion of objects. 2) Make observations and measurements of an object's motion to provide evidence that a pattern can be used to predict future motion. 3) Use evidence to support that the gravitational force exerted by Earth on objects is directed toward the Earth's center. 4) Explain the cause and effect relationship of two factors (mass and distance) that affect gravity.

Density Coaster

This activity would be appropriate completed by the following disciplines:

Occupational therapy, LCSW, Family Services, Industrial Arts

Instructions:

Students will each be given a bag of balls. They will mark the balls with a colored dot for identification. Students will play and interact with one ball at a time. Students will use a stopwatch to time each ball traveling through the course. The group will then come together and complete the following chart as group (using volunteers)

In two groups, students will then design a course to test the speed of the balls rolling through the course.

Description	Mass (g)	Size (mm)	Texture	Name	Time: Course A	Time: Course B
Golf Ball	46	42	Bumpy			
Steel Ball	131	31	Smooth			
Wooden Ball	18	37	Soft			
Ping Pong Ball	3	40	Shell like			
Gum Ball	6	24	Lumpy			
Bouncy Ball	22	36	Squishy			
Wiffle Ball	7	40	Holes			
Foam	5	48	Rough
