100%

Upwork success · 900+ jobs

5.0

Clutch · 30+ reviews

50

in-house senior engineers

Offices in Ajman (UAE), Hong Kong, and Astana (Kazakhstan).

Your data stays in your infrastructure

- During development, our engineers work on a staging server with test data, not your real users' data.
- In production, your app runs in your own cloud, on credentials you own and can revoke at any time.
- We sign an NDA before we see anything, work under least-privilege access, and cover data handling in a DPA.
- At handoff, the full codebase and every access key transfer to you.
- For ongoing maintenance, we keep scoped access under your control, so you can return later for updates without re-onboarding a team.

You own everything we build

- All code and intellectual property are assigned to you from day one, not negotiated at the end.
- We deliver straight into your GitLab or as a documented archive another team could pick up.
- No vendor lock-in and no black box.

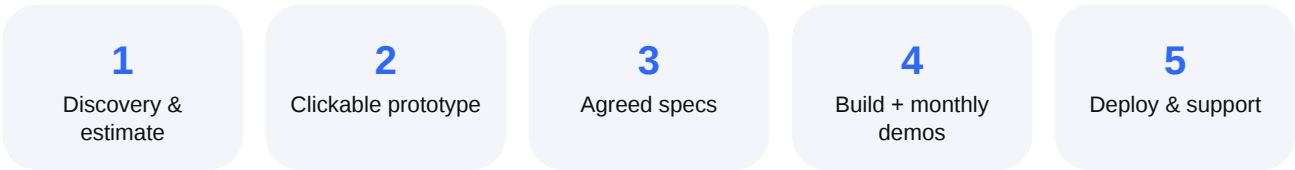

Built to your compliance requirements

- We build products to the standards your industry answers to: HIPAA for healthcare data, SOC 2 controls for enterprise, GDPR for EU users.
- On-prem and private-cloud deployment options for regulated environments.
- We are not selling you a certificate. We build software that passes your auditors.

Senior engineers, not vibe-coders

- 50 senior engineers in-house, not subcontractors. Roughly 1 in 400 applicants gets hired.
- AI-assisted, senior-led: we use AI to make our engineers faster, never to replace their judgment.
- A 100% Upwork success score across 900+ paid jobs since 2005 means we have finished every project we took on.

How we work

Time and materials in sprints, so you steer the project instead of betting on a fixed spec. You own the code at every step.

Proven in regulated industries

Healthcare	VALT (HIPAA video surveillance, 770+ US healthcare organizations, 50,000+ users) and CirrusMED (HIPAA telehealth for direct primary care).
Enterprise	Nucleus (on-prem communication for regulated environments) and BrainCert (EdTech SaaS, 100,000+ customers).
Public sector	TransLinguist (interpreter video on a national health interpreting framework, 75+ languages, 30,000+ interpreters).
Media	Worldcast Live (HD concert streaming for ~10,000 concurrent viewers) and Sprii (live video commerce, 3,000+ brands).

Who you're working with

Fora Soft has built real-time video, audio, and AI software since 2005. Fifty senior engineers, fully in-house, no subcontractors. Led by CEO Nikolay Sapunov and co-founder Polina Sapunova (CFO/CMO).

Have a specific security, data, or IP question?

Send it to your Fora Soft contact or email eager2develop@forasoft.com. You will get a straight answer, not a sales deflection.
