Entropy Coding Cheat Sheet

Which entropy coder ships in which codec, plus quick-pick guidance for encoder builders.

1 · The three algorithms

Algorithm	What it does	Trade-off
Huffman (1952)	Optimal whole-bit prefix code. Wastes up to 1 bit/symbol vs Shannon limit.	Fast table lookup.
Arithmetic (1970s)	Fractional bits/symbol. Tracks Shannon limit almost exactly.	Serial data dependency.
CABAC (2003)	Binary AC + context modelling. 10–15% over CAVLC at same quality.	Throughput bottleneck.

2 · Which entropy coder ships in which codec

Codec	Entropy coder	Alphabet	Note
MPEG-2	Huffman (static tables)	Symbol-by-symbol	Set-top box era; required all profiles.
H.264 Baseline / Extended	CAVLC	Symbol-by-symbol	Universal fallback; no CABAC in these profiles.
H.264 Main / High	CABAC	Binary	Default for streaming; 10–15% smaller than CAVLC.
HEVC / H.265	CABAC (redesigned)	Binary	Mandatory in all profiles; 153 contexts.
VP9	Boolean binary AC	Binary	Predecessor of AV1.
AV1	Multi-symbol AC (daala_ec)	Up to 16 symbols	Patent-aware; better hardware parallelism.
H.266 / VVC	CABAC + multi-hypothesis	Binary	+3–5% bitrate savings traced to entropy stage.

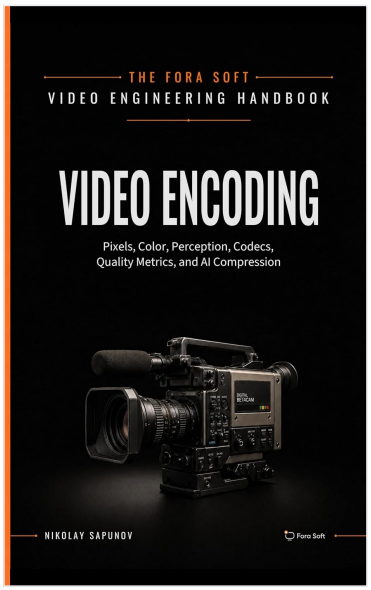

3 · Quick-pick guidance

Streaming OTT / VOD	H.264 High + CABAC for broad reach; AV1 where decoders allow.
Surveillance / IoT camera	Often H.264 Baseline (CAVLC) by default — switch to Main + CABAC if hardware allows.
Live low-latency	CABAC; tune encoder preset for throughput. HEVC tiles help parallelism.
Premium HDR / 4K master	HEVC or VVC; the entropy stage carries 3–5% of VVC's gain.
Bandwidth-constrained mobile delivery	AV1 when supported; CABAC fallback on H.264 Main/High.

4 · Common mistakes

- Entropy coding is lossless — switching coders changes file size, not picture quality at the same bitrate.
- CABAC is NOT always on in H.264. Baseline / Extended profiles use CAVLC only. Check the profile, not the codec name.
- AV1 does not use CABAC. It uses daala_ec, a multi-symbol arithmetic coder with up to 16 symbols per step.
- Wider Huffman tables eventually cost more than they save — the rounding waste fix is arithmetic coding.

Video Encoding: A Complete Guide to Video Compression

From Pixels and Color to H.264, HEVC, AV1, Quality Metrics, and AI

By Nikolay Sapunov, CEO at Fora Soft · 1,522 pages · Kindle & paperback on Amazon

Read it on Amazon → amazon.com/dp/B0HF52B65R

This sheet shows which entropy coder ships in which codec and when to pick each. Volume 1 places entropy coding inside the full encoder: Huffman, arithmetic coding and CABAC, context modelling, the profiles that enable them, and the throughput limits they set for hardware decoders.

WHAT YOU WILL FIND INSIDE

- Huffman, arithmetic coding and CABAC
- AV1 multi-symbol coding
- Context modelling and adaptive probabilities
- Profiles and decoder throughput limits

THE FULL HANDBOOK · 7 VOLUMES · 9,000+ PAGES · ALL ON AMAZON

Vol. 1 · Video Encoding — pixels and color to H.264, HEVC, AV1, quality metrics and AI
Vol. 2 · Video Streaming I — network transport, contribution and ingest, HLS, MPEG-DASH, CMAF
Vol. 3 · Video Streaming II — ABR, CDNs, players, WebRTC, DRM and the economics of delivery
Vol. 4 · Audio for Video I — PCM, codecs, loudness, accessibility, real-time voice processing
Vol. 5 · Audio for Video II — jitter buffers, lip sync, Atmos, quality metrics, neural codecs
Vol. 6 · AI for Video I — models and inference, computer vision, speech, search, generative video
Vol. 7 · AI for Video II — real-time pipelines, agents, serving, cost, compliance, verticals

Need to squeeze more quality per bit out of your encoder settings?

We will audit profiles and encoder options across your ladder and show the bitrate saved at equal VMAF. 250+ video products shipped since 2005.
