

Multichannel Audio History - Timeline Cheat Sheet

From 1881 stereo to 2021 Apple Spatial Audio: dates, formats, channels, and what each file stores.

The 60-year timeline

Year	Format	Channels	What the file stores
STEREO ERA			
1881	Ader theatrophone	2	Two earpiece feeds (demo)
1931	Blumlein patent	2	L + R; coincident mic, 45/45 groove
1933	Bell Labs / Stokowski	3	Three live telephone-line channels
SURROUND ERA			
1940	Fantasound (Fantasia)	~3 + surr	First commercial multichannel film
1953	CinemaScope	4	4 magnetic feeds (L,C,R + surround)
1971	Quadraphonic (failed)	4	Format war: SQ / QS / CD-4
1976	Dolby Stereo	4>2>4	Lt/Rt matrix in two optical tracks
1992	Dolby Digital 5.1 (AC-3)	5.1	Six compressed speaker feeds
1993	DTS	5.1	5.1 on synced CD-ROM (Jurassic Park)
1999	Dolby Surround EX	6.1	Sixth (rear-centre) matrixed in
2010	Dolby Surround 7.1	7.1	Eight discrete feeds (Blu-ray)
IMMERSIVE ERA			
2012	Dolby Atmos	<=64 feeds	Bed + up to 128 objects + metadata
2015	MPEG-H / DTS:X	layout-free	Channel + object + scene bitstream
2021	Apple Spatial Audio	2 (rendered)	Atmos master -> HRTF binaural

Reading the channel notation

5.1 = 5 full channels + 1 LFE (bass-only). The .1 is the subwoofer, not a full channel.

7.1 = 7 ear-level channels + 1 LFE.

7.1.4 = 7 ear-level + 1 LFE + 4 OVERHEAD (height). Third number = ceiling speakers.

9.1.6 = 9 ear-level + 1 LFE + 6 overhead = 16 speakers total.

Remember

- ☐ Channel count jumped whenever a cheap delivery medium made the extra channels affordable.
- ☐ Quad failed from a 3-way format war and unclear benefit - not bad engineering.
- ☐ Object-based audio stores sounds + positions; the renderer maps them to your speakers.
- ☐ One object-based master plays correctly from headphones to a 64-speaker cinema.
- ☐ Tier-1 anchors: ITU-R BS.775 (5.1 layout), ATSC A/52 (AC-3), ISO/IEC 23008-3 (MPEG-H).

Audio for Video: A Complete Guide to Sound in Video Products

From PCM and Codecs to Loudness, Accessibility, and Real-Time Voice Processing

By Nikolay Sapunov, CEO at Fora Soft · 1,229 pages · Kindle & paperback on Amazon

[Read it on Amazon →](#)
amazon.com/dp/B0HH6PRZH1

This timeline runs from 1881 stereo to object audio and explains the channel notation. Volume 4 covers what those formats mean for a product today: channels and layouts, PCM and bit depth, the codecs that carry 5.1 and 7.1, and loudness for multichannel mixes.

WHAT YOU WILL FIND INSIDE

- Channel layouts from stereo to 7.1.4
- Codecs that carry multichannel audio
- PCM, sample rate and bit depth
- Loudness and downmix for multichannel

THE FULL HANDBOOK · 7 VOLUMES · 9,000+ PAGES · ALL ON AMAZON

Vol. 1 · Video Encoding — pixels and color to H.264, HEVC, AV1, quality metrics and AI

Vol. 2 · Video Streaming I — network transport, contribution and ingest, HLS, MPEG-DASH, CMAF

Vol. 3 · Video Streaming II — ABR, CDNs, players, WebRTC, DRM and the economics of delivery

Vol. 4 · Audio for Video I — PCM, codecs, loudness, accessibility, real-time voice processing

Vol. 5 · Audio for Video II — jitter buffers, lip sync, Atmos, quality metrics, neural codecs

Vol. 6 · AI for Video I — models and inference, computer vision, speech, search, generative video

Vol. 7 · AI for Video II — real-time pipelines, agents, serving, cost, compliance, verticals

Supporting 5.1, 7.1 or Atmos in your video product?

We will check your encode, packaging and player for multichannel and plan downmix and fallback for every device. 250+ video products shipped since 2005.
