

Kantox Solutions: how a European Gas company protects profit margins from FX risk

This European company, a leading Liquefied Petroleum Gas (LPG) wholesaler, purchases gas internationally and distributes it through its retailer network in two ways: with semi-annual contracts with pre-established total volumes and by filling orders from extra-contractual demands.

The company was looking for an automated solution to protect its operating margins from currency risk while hedging both its forecasted and transactional exposure.

Kantox Dynamic Hedging®, Currency Management Automation software for end-to-end FX automation

FX CHALLENGES

The **high sensitivity of the business to FX** underlined the need to protect operating profit margins from market fluctuations

The **extended time lapse between firm commitments and cash settlement** required an efficient solution to hedge transaction exposure

The **excessive burden** that **manually-executed FX risk management** was putting on the firm's treasury resources

KANTOX SOLUTIONS

A micro-hedging program for firm commitments allows the company to **reduce FX risk on its transactional exposure**

A static hedging program **combined with conditional orders** does away with the risk of over-hedging forecasted FX exposures

An interface provides the firm's risk managers with **real-time visibility** over both forecasted and transaction exposure

BENEFITS

The company protects its profit margins from currency risk while effectively **hedging all cash-flow FX transaction exposure**

Quickly hedging the forecasts and firm orders allows the company to **maximise the impact of favourable forward points**

The automated solution **streamlines the entire FX workflow**, thereby doing away with 'key-person risk' in FX management
