

Combining Lumana’s AI video intelligence with Brivo’s cloud access control enables real-time alerts, video-linked event logging, and faster incident response.

Integration overview

Access events + video

Lumana automatically indexes entry, exit, and door-status events with video—simple to review, download, or share.

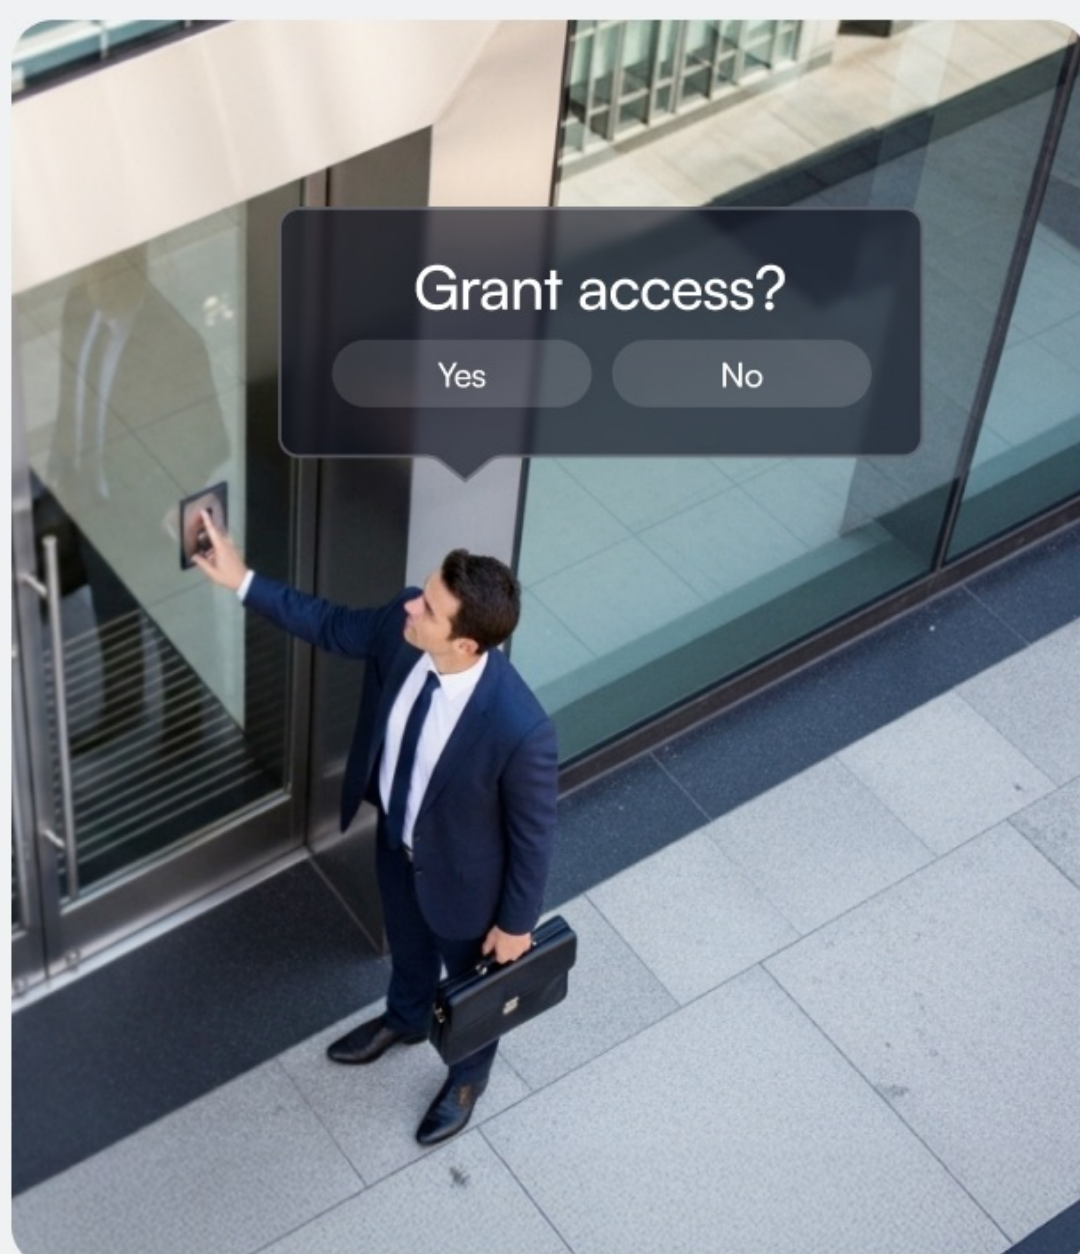

Real-time alerts

Receive instant, AI-powered alerts for access-related events like tailgating and doors forced open.

Door control

Visually authenticate visitors and quickly lock or unlock doors directly within the Lumana platform.

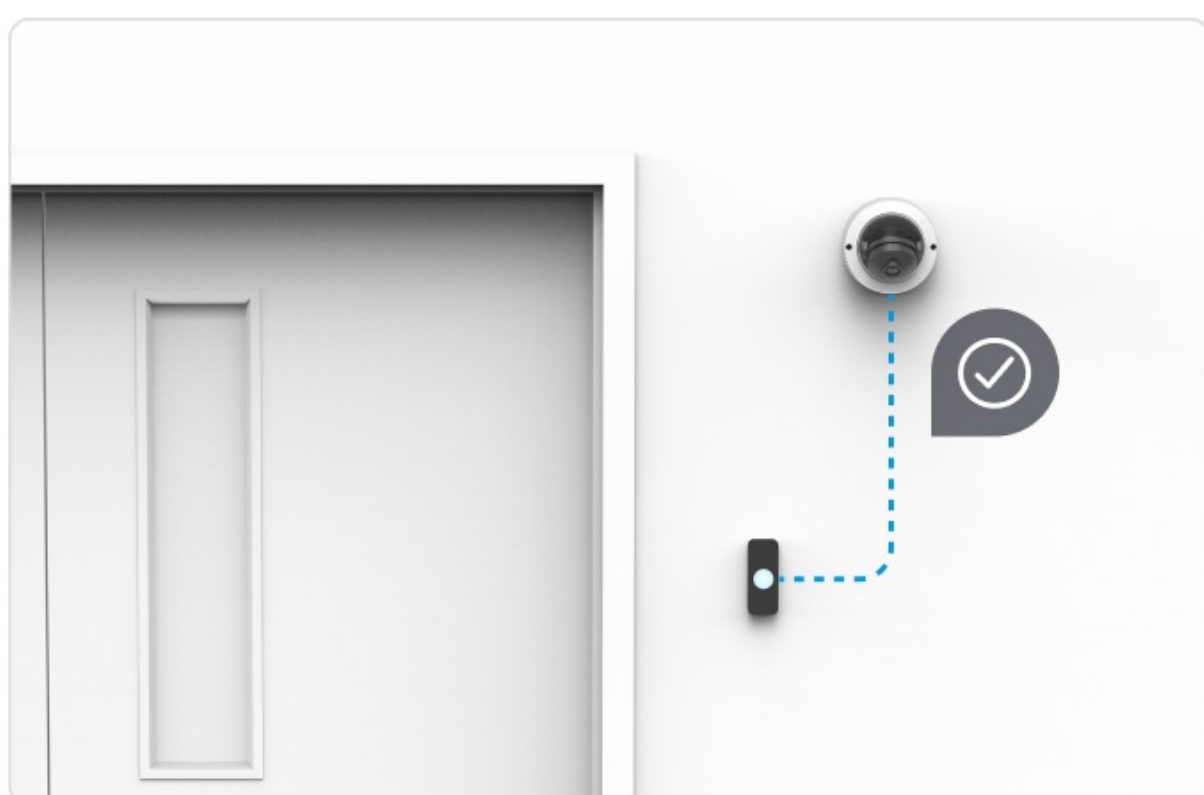

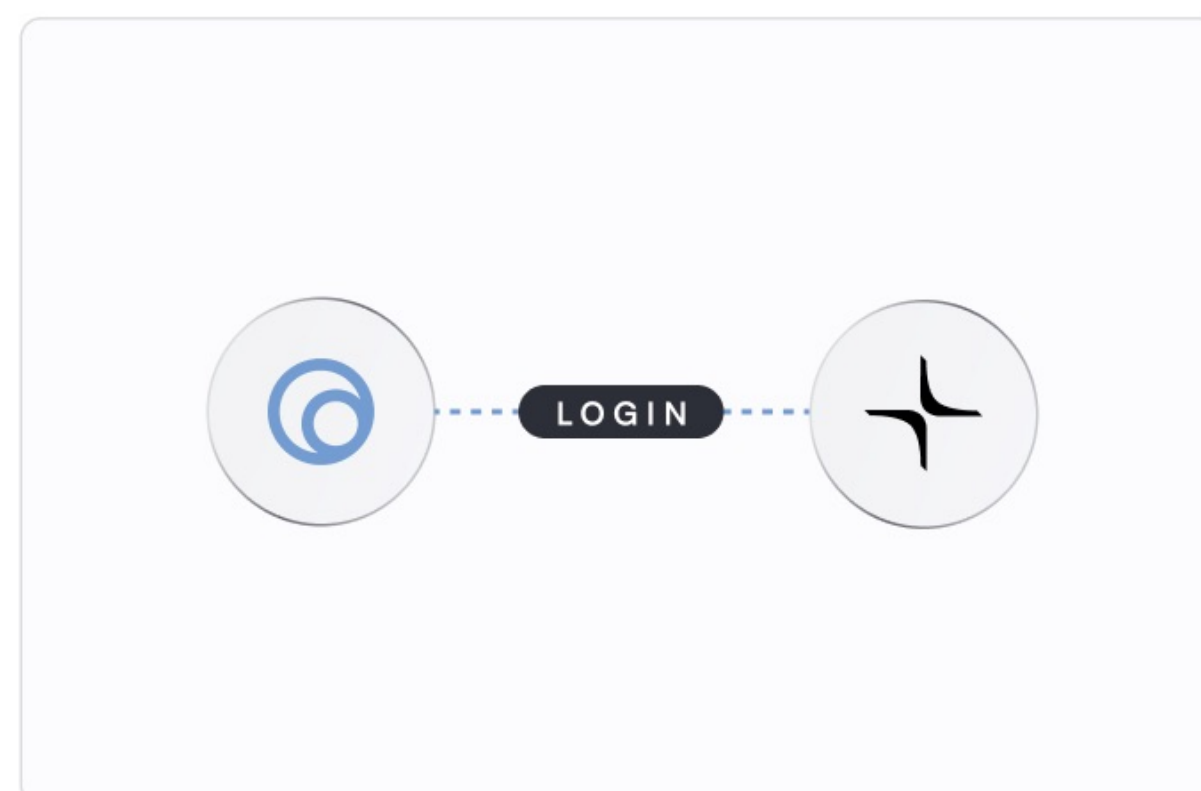

Benefits

Integrating Brivo with Lumana elevates security and team efficiency. Authorized access is enforced, while unauthorized attempts—including tailgating and forced-open doors—are detected and alerted in real time. Every access event is automatically logged and time-synced with the matching video for rapid review. By combining real-time alerts, door control, logs, and video in one place, teams cut manual monitoring, reduce false alarms, and accelerate incident response and investigations.

How it works

Integrate in minutes

Leveraging Lumana's open architecture, simply add your Brivo API key to connect the two systems in minutes, without re-architecture or downtime.

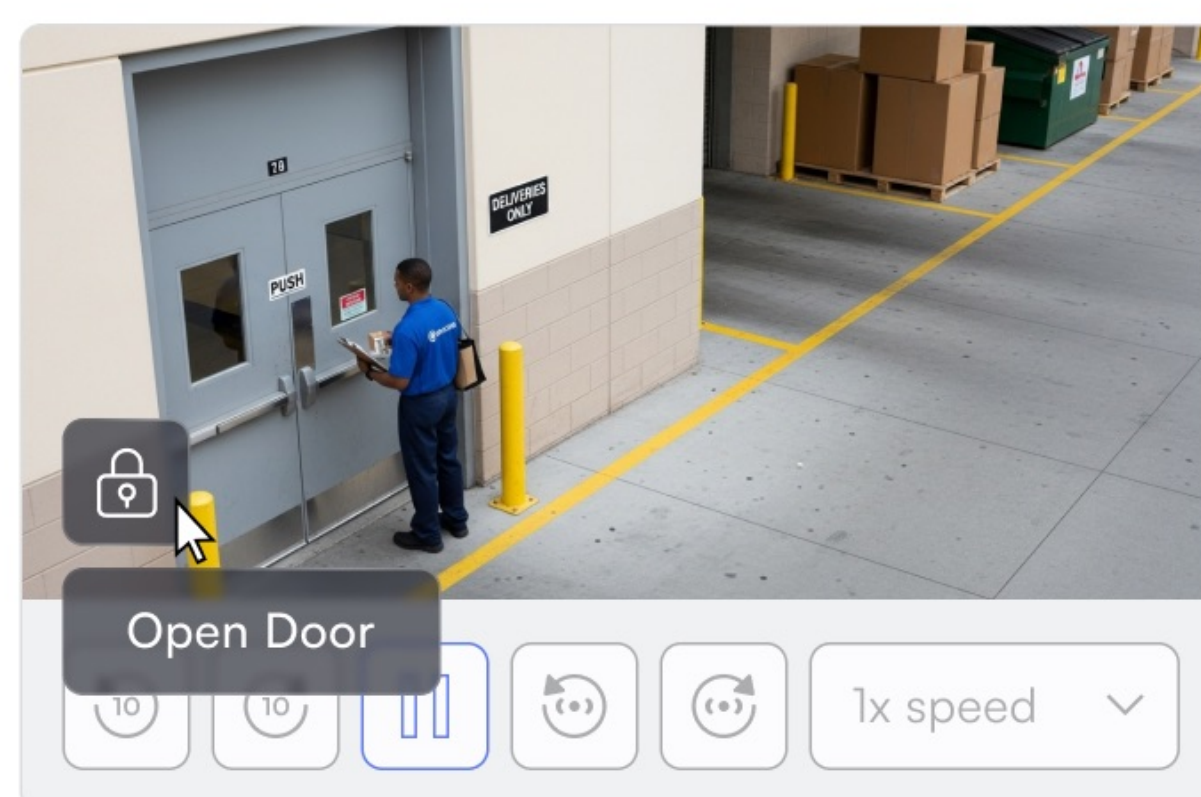

Pair doors and cameras

Choose your locations and doors, then assign the camera(s) covering each entry point. From then on, every access event is auto-logged with time-synced video for easy verification and search.

See what matters

Get real-time alerts for tailgating, forced open, or door-held events, and control doors in Lumana VMS+. Quickly pull up and review access event video via Smart Search or event logs.
