Mine entry interpretive report included as standard

CON29M

OFFICIAL COAL MINING SEARCH

The professional opinion on the risk of coal mining activity to residential properties

Key features and benefits

- **Integrated mine entry assessment as standard:**

Where mine entries are present, our interpretive analysis is built in—no delays, no add-ons, no extra cost.

- **Building-specific risk clarity:**

Separate, definitive risk statements for both the building and the site—offering more meaningful insights for your client.

- **Clear visual context with mapped features:**

Site boundary, building footprint, mine entries and zones of influence are all mapped clearly for confident decision-making.

- **Powered by NGD Buildings data:**

High-resolution, accurate building information ensures reliability you can trust—no estimations or guesswork.

- **Actionable guidance and next steps:**

We don't just flag risk—we guide your clients on what to do about it, helping you offer a more complete service.

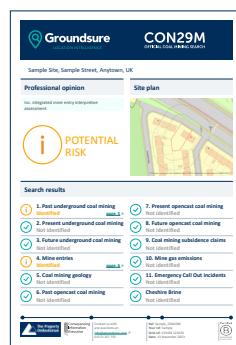

- **Efficient, streamlined delivery:**

A single, all-in-one report that reduces complexity and saves time.

- ✓ Digitised boundaries showing the main building and property;
- ✓ Detailed map showing plotted mine entry and zone of influence;
- ✓ Information on any treatment details, recorded depth and diameter;
- ✓ Information on mine entry type (shaft or adit);
- ✓ Will include any records where the mine entry is outside 20m but still impacts the property;
- ✓ A professional opinion on the risk posed by trusted mining experts with over 40 years experience.

If you have any further questions about this our in house experts are always available!
