# How to Share Your Digital Business Card Using the CardByte App Widget
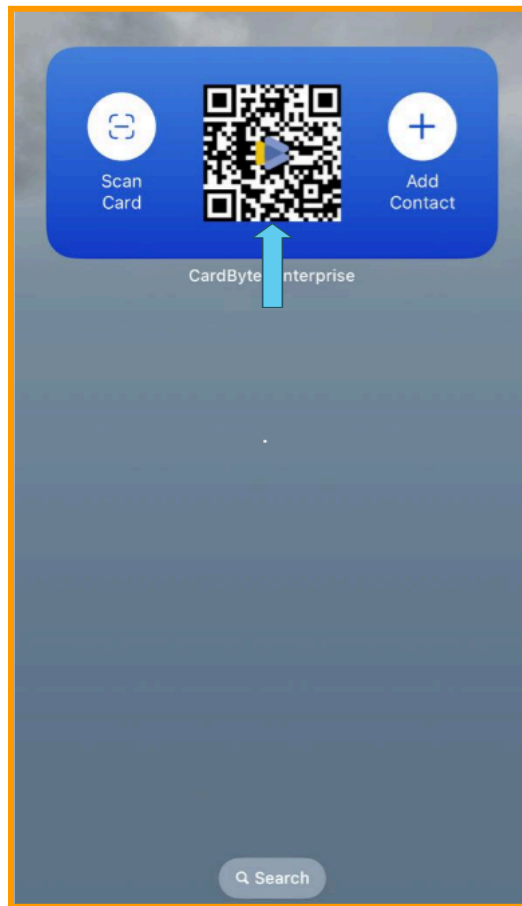

Easily share your card directly from your home screen with these steps:

1. Add the **CardByte Widget** to your mobile device.

2. Ask the recipient to **open their phone's camera, Google Lens,** or **QR scanner**.

3. Have them **scan the QR code** displayed on your CardByte Widget.

4. A small **pop-up will appear** on their screen—either tap **"Show"** or directly click the link.

5. The link will open in their **mobile browser**, displaying your full digital business card.
6. The recipient can then tap **"Save Contact"** to instantly store your details in their phonebook.

The CardByte app is not required on the receiver's phone, making this a fast and seamless way to connect.
