

Are there any device requirements to use CardByte?

- We do our best to make sure CardByte works smoothly across a wide range of devices, browsers, and operating systems. However, due to differences in hardware, software versions, and third-party apps, some users may occasionally experience issues.
- If you face any such compatibility problems, our technical team will review and address them on a **best-effort basis**. We continuously work to improve support for as many devices and platforms as possible, but we can't guarantee perfect compatibility in all cases.
- Cardbyte AI is compatible with both **Android and iOS** operating systems. The application supports **iOS 12** and later and **Android 8** and above, ensuring optimal performance and a seamless user experience across all supported devices.
