

Trace your next pre-release leak back to the source

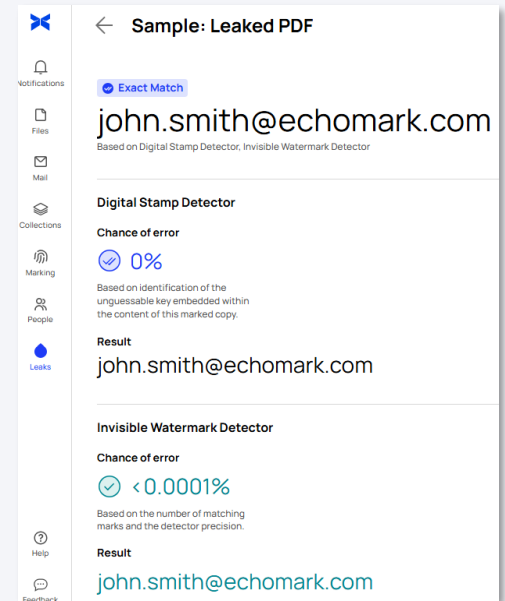

A single screenshot on Reddit can collapse months of marketing strategy in minutes. EchoMark turns your leak investigation from weeks to certainty in minutes – with forensic evidence that holds up in court.

EchoMark embeds invisible, individualized watermarks into every build, script, and screen shared with your team, contractors, and press – so when sensitive assets surface before launch, you know whose copy leaked.

LEAKED CONTENT

LEAK IDENTIFICATION

HOW IT WORKS

01

Watermark

EchoMark silently embeds invisible watermarks into every email, document, image, and screen

02

Leak occurs

A screenshot, photo, printout, or forwarded file appears outside your organization

03

Upload artifact

Submit the leaked artifact into EchoMark's investigation tool

04

Definitive answer

Identify whose copy was leaked, with a confidence score and chain of custody
