

Coast / ACM Engineering

Coast/ACM's engineering team takes pride in its ability to serve each and every customer with outstanding quality. With decades of combined experience, engineers at Coast/ACM have extensive expertise in designing and testing a wide variety of magnetics components.

The Coast/ACM engineering team focuses on military (MIL-PRF-27) & space (MIL-STD-981) magnetics as well as custom products. The ability to convert and fine-tune your commercial components into military and space level products is our speciality - as well as bringing your custom designs to fruition. Although our expertise lies in incorporating and developing customer drawings, Coast/ACM engineers are well-versed in designing custom magnetics to meet your specifications.

Over the years, the team has refined many manufacturing & test procedures to ensure value and consistency. Quality in design and performance is the primary asset that our team offers to you and your customer. Coast/ACM's design engineers are constantly collaborating with our manufacturing engineers to guarantee a controlled production process from start to finish.

In addition to the standard product line, Coast/ACM has provided thousands of custom-designed magnetics over the years to customers with more specific needs. We have the capability to utilize a myriad of manufacturing procedures and package options (e.g. surface mount, leaded, gull-wing) to satisfy all requirements of form, fit, and function.
