

## USE CASE

# Transition from v1 to v2 Components

## Use Case

Customer has a large quantity of threat models with v1 components and wants to upgrade those to v2 components. Switching these components directly will remove legacy content from the model.

## Requirements

Customer wants to keep legacy content on the model, does not want to experience data loss, and wants to get the new content from the v2 content on the legacy threat models.

## Solution

Version all threat models. Add v2 content to v1 components. Compare and true-up v1 and v2 content on legacy threat models.
