

USE CASE

Custom Security Content Standard

000

Use Case

Customer has a custom internal standard which is partially covered by some of the IriusRisk content. They want to be able to see their content and be able to add their internal standard to the default content.

000

Requirements

The internal standard needs to be added to default content without needing to duplicate the default content. Additional custom content needs to be added alongside the default content.

000

Solution

Export all default content and inventory existing content against internal standard.
Add standard mappings to default content.
Import custom content with internal standard.
Action using the rules engine.
