

USE CASE

Custom Components + Documentation

000

Use Case

Customer wants to have custom components with .md based documentation to be hosted in their internal portal for users to review when required. Customer does not have internal capacity to build this content.

000

Requirements

Documentation must be markdown based and follow customer provided documentation requirements - threat tables, weaknesses, countermeasures, with detailed descriptions. Components should be delivered in the yaml and xml with v2 styling. Components will be released once per quarter during upgrade cycle.

000

Solution

Build detailed assessment of content for each component. Build yaml and xml based v2 style components.
