

USE CASE

Security Content Import

Use Case

Customer has a mature threat modeling process with internal security requirements and documentation. They want to add this information to IriusRisk to be used in threat models.

Requirements

Content must be accessed through a mixture of components and questionnaires. Content should be mapped to internal standards and have the same minimum functionality as other standards.

Solution

Build content ontology for import into IriusRisk. Import and action custom content through risk pattern mapping to components and rules creation.
