## ULTRA-DEEP CAPACITY REEL TRAILER

### Enabling Ultra-Deep Coiled Tubing (CT) Performance

As wells reach greater depths and laterals extend further, coiled tubing operations require surface equipment that can consistently support higher loads, longer strings, and more complex logistics.

UDx is STEP's purpose-built coiled tubing reel configuration engineered for ultra-deep and extended-reach applications. It is designed to address critical surface limitations by increasing reel capacity, improving transport control, and simplifying rig-up. This allows operators to plan and execute complex interventions with greater certainty, improved efficiency, and reduced operational risk.

### What UDx means for your operation:

#### 35,000 FT OF 2-5/8" CT

Reach up to 35,000 ft of 2-5/8" coiled tubing.

#### FASTER RIG-UP

With integrated injector handling.

#### 28,600 FT OF 2-7/8" CT

Reach up to 28,600 ft of 2-7/8" coiled tubing.

### Applications

- Plug mill-outs
- Acid stimulation
- Wellbore cleanout
- Confirmation runs

### Key Benefits

- Confidently plan deeper, more complex programs
- Improve operational efficiency from mobilization to execution
- Enhance safety in demanding environments
- Minimize downtime and reduce operational delays

### Features

- Up to 35,000 ft capacity of 2-5/8" CT
- Up to 28,600 ft capacity of 2-7/8" CT
- Purpose-built trailer with advanced steering and suspension
- Integrated injector handling and optimized equipment layout
