

MedITEX Release Notes

Version 4.0.0

Features

The first version of MedITEX IVF was released with Firebird 2.0.

Firebird 2.5 was released in 2010 and has not been updated for the MedITEX environment since. Since then, the Firebird team has released several major versions with a number of changes and improvements.

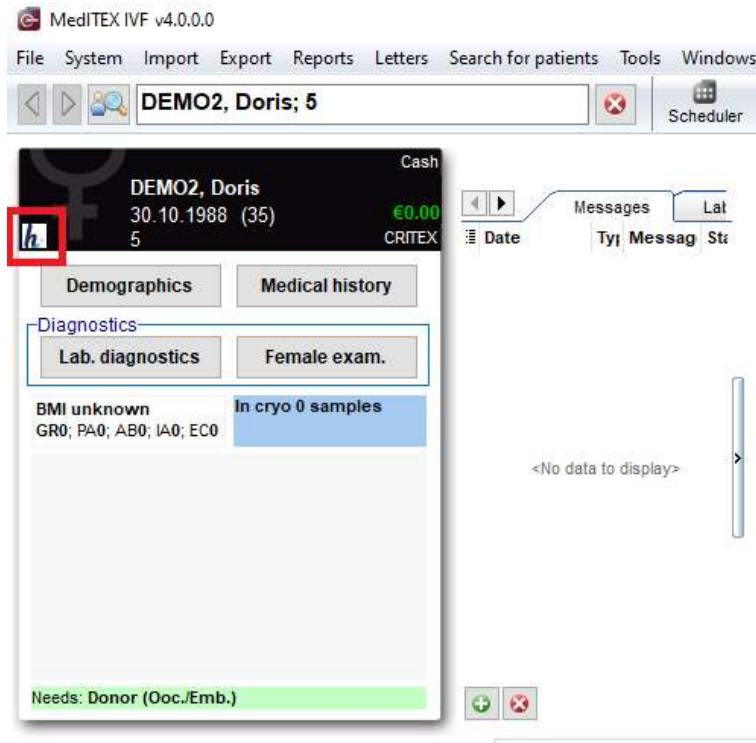

The decision of upgrading to the latest stable Firebird version 4.0.3 was pushed by some important benefits:

- **Encryption:** Database contents and network traffic
- **Security:** Secure user management (SRP User manager), deprecation of UDFs, read-only system tables
- **Performance:** Caching, handling of record versions
- **Functionality:** Build-In functions (e.g. Hashing), improved syntax
- **Fixes:** Inconsistencies and garbage collection

1) MedITEX IVF

a) General

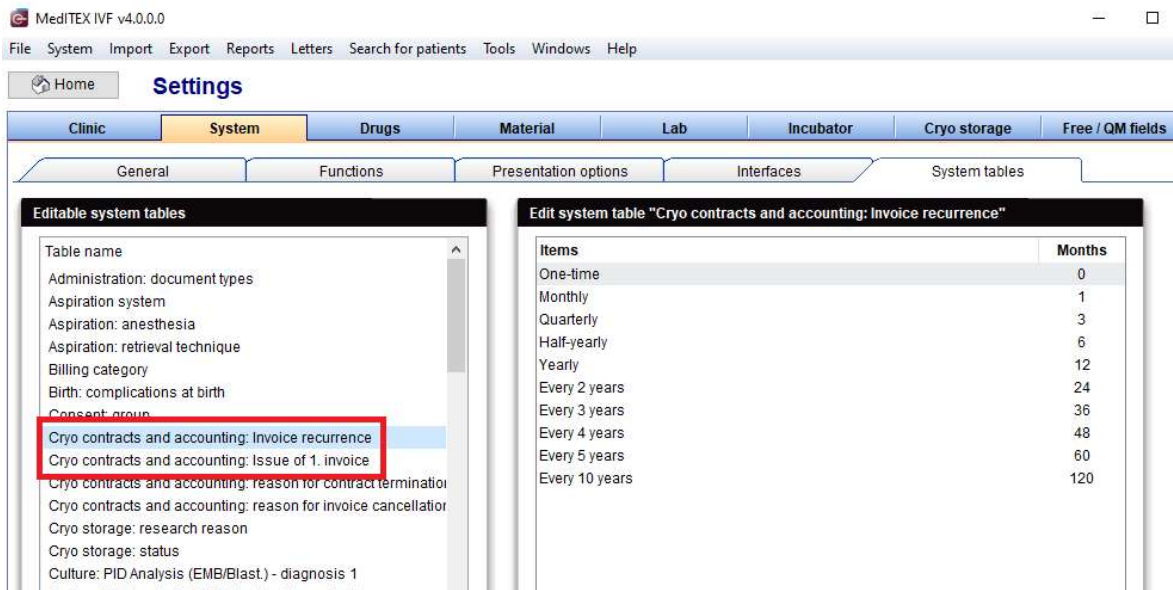

The connection between patients and the Hope app is now directly visible with the Hope symbol.

MedITEX Release Notes

b) Cryo contracts

The “Invoice recurrence” and “Issue of the 1st invoice” fields have been added to the system tables. The options can now be defined by the users.

Bugs

1) MedITEX IVF

a) General

“Show semen analyses” function in the inbox has been adjusted.

The saving process and the patient search in the inbox have been optimized.

Error message when generating the cycle summary has been fixed.

b) Planned cycles

Visual adjustments have been made to the drugs selection window.

c) Consents

The valid from/until function has been revised.

Gender icons have been added back.

Inconsistencies with the “Cancel” button have been resolved.

2) MedITEX KPI

Visual adjustments to the charts have been made.
