Elm Surfaces

Inside Kosei Collection

Vincent Van Duysen

With **Kosei**, **Vincent Van Duysen** proposes a range of ceramic surfaces developed with pure and tactile materials, inspired by lava rocks such as obsidian and volcanic glasses, which are homogeneous, amorphous and with exceptional hardness. The end result is a timeless design conceived for “**grand**” **architecture**, characterised by extreme versatility.

The collection is produced with the **extrusion method** and is particularly **suitable for floors**, both indoors and outdoors. The wide range of elements features the 60x180 cm, 60x90 cm, 60x60 cm, 15x90 cm, 15x60 cm, 15x30 cm and 15x15 cm formats, that have a soft texture and are perfectly modular with each other, as well as the Chevron module in size 9,6x56,5 cm, created to lend depth to surfaces. The elements make it possible to design elegant **matt surfaces**, but also allow for creativity: by choosing one or more formats and alternating the available colours – Bone, Storm, Terra, Grey Green and Dark Grey – it is possible to create different harmonious yet dynamic compositions.
