# Are you ready for a surprise audit?

If your company falls under ITAR, EAR, OFAC, or C-TPAT, the risk isn't in having the right policies. It's in proving they're enforced. Compliance starts at every entry point, with real-time control over who gets in, when, and why. So if an auditor showed up today, could your team deliver?

The questions every auditor will ask. Can you answer them today?

? Who's currently in your restricted areas?

? Did every foreign visitor sign an export compliance notice today?

? Can you confirm that no denied party accessed your site this week?

? Do you have signed NDAs for every visit last month?

? Is any location skipping a required screening step?

If you answered "no" to any of the above questions, you're not alone —but you are exposed.

How modern teams stay compliant—no matter what changes

Compliance challenge today	Emerging complexity	Mature team approach
Basic visitor screening	More regulation and global risks	Automated, risk-based routing
Paper-based compliance records	Multiple sites, disparate systems	Centralized system of record
Manual audit preparation	Demand for real-time proof of compliance	Continuous monitoring and instant reporting
Static policies and one-time training	Dynamic risks and shifting regulations	Built-in policy enforcement, adaptive workflows
Reliance on individual vigilance	Human error and inconsistent execution	System-driven enforcement and fail-safes

Be ready for any audit, any time
