# Built for trade compliance from the ground up

Managing high-stakes security and trade requirements? Envoy automates visitor screening to stop risks at the front door—making enforcement faster and easier, without extra hassle.

Prevent compliance breaches before they happen

✅ **Instantly screen visitors against denied party and sanctions lists**

Instantly check OFAC, BIS, and SDN lists the moment someone signs in. No manual lookups. No missed flags.

✅ **Apply location-specific rules to high-risk visitors**

Trigger alerts or route visitors based on nationality, visit purpose, or access level, automatically.

✅ **Siloed systems and manual processes**

With increasingly complex environments, spreadsheets, paper logs, and disconnected tools put compliance at risk.

✅ **Store encrypted, audit-ready records you can trust**

Maintain time-stamped documentation in one encrypted system, making audits fast, not frantic.

Power your protocols with connected systems

Envoy integrates with your existing systems to automate compliance without extra hassle.
