HeadGrower Release Notes

3.0.6 — October 22, 2026

- New **Cold Exposure report** for overwintering crops. It shows house temperature against bands you set, and you can use either vernalization (beet chill curve) weighting or custom weighting. The report defaults to the October–March season, tracks a chill-hour goal, and can be saved as a PDF.
- The site page has a new **Reports** and **Compare** layout. You can compare controllers side by side, or compare one controller across two time periods.
- New settings pages for automatic downloads and high/low reports.
- Controller graphs have a graph height option, and the range summary shows average temperature and heat and cool run time.

3.0.2 — July 22, 2026

- New **timer groups**.

3.0.0 — July 8, 2026

- Redesigned sensor-only page with scrolling and a clearer current reading.

2.4.5 — June 24, 2026

- Compare data between controllers.
- Date picker for graph and analytics pages.
- Set a default site.
- Timers:
    - Filter by house.
    - Calendar view is the default and shows running timers.
    - Scheduled timers can be removed.
- "Controllers" are now called "houses."
- New tabbed status pages, and improved navigation on phones and desktop.
- Fixed the selected site resetting after a few seconds.

2.4.4 — May 19, 2026

- **Spanish and French** language support, with a language selector.
- Timers:
    - Calendar view, day-of-week timers, and skip next run.
    - Schedules are time zone–aware.
- Irrigation alerts can be acknowledged.
- Toggle for online/offline notifications.
- WeatherBoss wind and rain alarms are shown separately, and graph overlays are improved.
- Option to hide outputs.
- Easier-to-read audit trail.
- Sensor-only controllers in lists and on status pages.
- Logs page improvements.

2.4.0 — July 10, 2025

- Long-term data storage available

2.3.71 — June 22, 2025

- Support for **Pulse (DOX) controllers**:
    - Dosing time, dosing delay, and alarm delay.
    - Output conditions.
    - Offline sensor status.
- Recurring alerts for sites.
- Redesigned notifications page, with push notification history filtered by controller and date.
- Subscriptions:
    - Edit add-ons, see a transaction summary, and resend receipts.
    - Admins can extend subscriptions and edit user access.

2.3.53 — February 5, 2023

- New **table view** for controllers.
- Logs on phones, with a full graph legend.
- "Remember me" at login.
- Fixed switching between WeatherBoss controllers.

2.3.4 — August 26, 2021

- **Text and phone call notifications.**

2.3.0 — June 15, 2021

- Hub ID in general settings.
- Timers:
    - Manual activation no longer overrides settings, and timers can be stopped while active.
    - Mister time remaining.
    - Shade mode display.
- Units for output run times.
- Graphs:
    - DIF/DAY/NITE backgrounds and tooltips.
    - Humidity, and TimeBoss light levels.
- Import settings for all users.
- H3 on the list and dashboard.
- Dashboard toggle for all desktop users.

2.2.0 — January 20, 2021

- Improved controller list layout.

2.1.0 — October 11, 2020

- New **dashboard**.
- Start and stop misters.

2.0.0 — August 17, 2020

- Fixed pop-ups on iOS.

1.9 — January 29, 2020

- First HeadGrower release, for phones, tablets, and desktop.
- Controller status, with audit trail, users, and notifications shown side by side on tablets and desktop.
- Edit controller general settings, Adjust Program values, and ClimateBoss vent and timer settings.
- TimeBoss status, settings, and logs, plus abort/resume and manual start.
- Edit shade, light, and mister settings.
- WeatherBoss status, wind direction, and logs.
- Log charts and statistics, with zoom by date.
- Manage and reorder sites, and manage controllers from the subscription page.
- Per-controller and per-site user roles.
- Download controller data and settings.
- Dark mode.
- Requires Android 7.0 or later.
