

# The NROC Project Accessibility Conformance Report WCAG Edition

(Based on VPAT® Version 2.5Rev)

**Name of Product/Version: EdReady - Version FE  
Projects 2601.0**

**Report Date:** April 2026

**Product Description:** EdReady is a math and English readiness system that employs a low-stakes knowledge inventory to personalize a learner's path to subject mastery within the context of a specific goal. EdReady is a web application.

**Contact Information:** [pcross@nroc.org](mailto:pcross@nroc.org)

**Notes:** Based on a comprehensive third-party accessibility audit, EdReady is certified as meeting WCAG 2.2 Level A and Level AA guidelines. We are committed to maintaining our compliance and have incorporated accessibility-validation as part of our regular development and release processes; however, accessibility bugs may still be found, just as non-accessibility-related bugs may still be found. NROC staff will collaborate with you to understand and resolve any reported issues ASAP upon discovery. Furthermore, at NROC we view accessibility improvements as an ongoing process, and we will continue to work toward providing the best experience possible for all students based on feedback from our users and any changes to the criteria themselves. We update this VPAT as needed.

**Evaluation Methods Used:** Testing was conducted by evaluators familiar with general product functionality and common user workflows, as well as accessibility requirements. Accessibility was assessed using assistive technologies such as screen readers, keyboard-only navigation, and screen magnification tools to verify usability without reliance on a mouse.

Both manual and automated testing methods were used. Manual testing evaluated user interactions such as navigation, focus order, and form use, while automated tools (Axe Core Webb extension, Wave Accessibility Checker extension, IBM Accessibility Checker extension, Axe DevTools, Wave Evaluation Tool, IBM Equal Access Accessibility Checker) identified common accessibility issues. Testing aligned with established standards, including WCAG 2.2, published by the W3C. Where applicable, vendor-specific or scenario-based testing methods were also used to validate real-world usability.
