Pull-PROx™

UNI-1096

Portable Dent Pulling Tower

- Quickly setup and pull aluminum or steel dents with over 1,300 pounds of pulling force
- Adjustable height from 65" allows for precision pulls & extend to over 8 ft wide using UNI-1098
- Vacuum seal allows for ultimate portability and wheels on tower for quick storage

NEW X-PLATE IS STANDARD ON ALL TOWERS & PLATE KITS!

• MOLDED RUBBER

Molded neoprene rubber base offers medium-soft durometer one-piece design for maximum seal contact and increased wear resistance as compared to neoprene foam seal.

• VULCANIZED CONSTRUCTION

The neoprene rubber is vulcanized directly to the X-plate creating a superior bond and making any separation virtually impossible.

• REINFORCING RIBBING

Internal contact ribbing bars have been added to increase lateral holding power required in more horizontal pulls at less than 40-degrees.
