A BETTER CLEAN.®

SuperSink

Triple Sink Dispensing System

The sleek, rounded-edge, stainless steel SuperSink dispenser functions like a ball valve dispenser but without the many common service-call related issues. Using our PVA water valve design, we have developed a low profile sink dispenser ready for the most demanding kitchen environments. The SuperSink provides dilution confidence in your detergents and sanitizers regardless of typical water pressure fluctuations. It's loaded with features like quick access cover, plug-n-play water valve components, positive on/off activation, an integrated hose strain relief, and accepts common water inlet options.

The Pilot Water Valve

The pilot-activated water valve simplifies service. With fewer components than competitive models, service and maintenance is easier and faster, making it the reliable water valve of choice.

Features & Benefits

- Sleek modern appearance great for open-air kitchens
- Easy turn on/off handles allow for activation with gloves on or off
- Durability of stainless steel with rounded edges found in molded designs
- Unique pilot activated water valve has superior performance to ball valves
- Easier to install and service with quick access cover and plug-n-play components
- Designed to eliminate common accidental misuse with positive on/off water valve
- Dual has optional two water feeds to control water temperature for detergent and sanitizer separately
- Accepts any common water inlet configuration including garden hose thread, compression, and push-on quick connect fittings
