POWER SUPPLY

PS-024-192VTD52JV2

- Input wires Black and White to be connected to AC L and N, Green wire to be connected to ground.
- Output wire Red to LED positive side (+), Black to LED negative side (-).
- Dimming cable DIM (+) Purple to 0/1-10V dimmer signal (+), DIM (-) Grey to 0/1-10V dimmer signal (-).
- Please make sure you connect these correctly otherwise your product will not function correctly and could be damaged.

USING TRIAC/PHASE CUT DIMMING

1. The Pulse-Width Modulation (PWM) output voltage can be adjusted through the input terminal of the AC phase line (L) by connecting a phase/TRIAC dimmer (lighting system).
2. Works with forward phase/leading edge, MLV and reverse phase/trailing edge, ELV, and TRIAC dimmers.
3. Please try to use dimmers with power at least 1.5 times the output power of the driver.

USING 0-10 / 1-10V DIMMING

DERATING CURVE

Load carried in accordance with the derating curve, according to the ambient temperature, in order to extend the working life.

INSTRUCTIONS

1. This driver should be installed by a qualified and professional person
2. Make sure the driver is installed with adequate ventilation to allow for heat dissipation
3. Ensure all wiring is correct before testing in order to avoid light and power supply damage
