

Part 1.2 Smart Buildings Initial Questionnaire

Module 6: Smart Buildings – Modern Technologies and Systems Integration Self-Evaluation Questionnaire (Initial Assessment)

Please respond to the following questions in your own words. The aim of this exercise is to reflect on your current understanding of the smart buildings domain prior to beginning the module. There are no right or wrong answers.

Question 1

1. In your view, what defines a “smart building”?
(Describe the key features or characteristics you associate with smart buildings.)

Question 2

2. Are you familiar with any European Union legislation or policy frameworks that address smart buildings or related areas (e.g., energy performance, building automation, digitalization)?
(List any that come to mind or briefly describe what you know.)

Question 3

3. Can you identify several modern technologies that, in your opinion, contribute to making buildings “smart”?
(Think about systems, tools, or innovations that enhance building intelligence or efficiency.)

Question 4

4. How would you personally assess or measure the “smartness” of a building?
(What factors or indicators would you consider important?)

Question 5

5. Is there a building in your living or working environment that you would consider smart? If so, what makes it “smart” in your opinion?)

Question 6

6. Do you think that the apartment building or house you live in have any elements of smartness?
