Surgical Tie Visor Mask

Instructions For Use

DONNING THE MASK

1

Thoroughly wash and dry your hands.

2

Remove the mask from its packaging. Hold the mask with the outer layer out.

The outer layer will be facing up and is usually coloured. This layer should be away from your face when donned.

3

Grasp the edges of the mask and gently bend the nose piece, ensuring your mask and visor are centered.

4

Hold the top of the mask at the center of the metal nose piece and pull the bottom edge of the mask to open the pleats.

5

Position the mask on your face with the nose piece centered on the bridge of your nose.

6

Fasten the top tie at the crown of your head, followed by the bottom tie behind your neck.

7

Slide your fingers underneath the bottom of the visor. Press the nose piece to the bridge of your nose and along your cheekbones to shape the mask to your face.

8

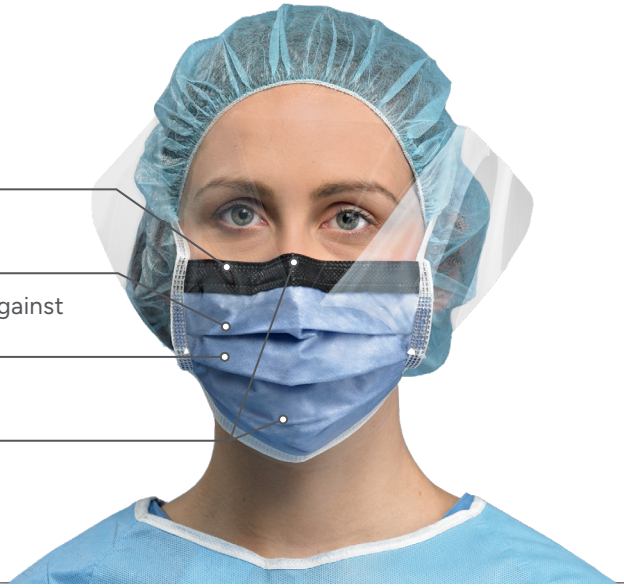

Adjust the visor as needed to reduce glare.

HOW DO I KNOW MY MASK IS ON CORRECTLY?

- The metal nose piece is at the top
- The pleats typically fall downwards and away from the nose (a “waterfall” pleat*)
- The white, or smoothest side, is on the inside against the wearer’s skin; the color always faces out
- The wearer’s nose and mouth are covered by the face mask

**Some mask styles may have pleats folding upward as well as downward. Contact your supplier if you require clarification.*

Surgical Tie Visor Mask

Instructions For Use

DOFFING THE MASK

1

Thoroughly wash and dry your hands.

2

Release the mask by breaking or untying the bottom tie followed by the top tie. Avoid touching other parts of the mask to prevent contamination

3

Dispose in an appropriate waste container.
