

Remember to charge AV1 every night.

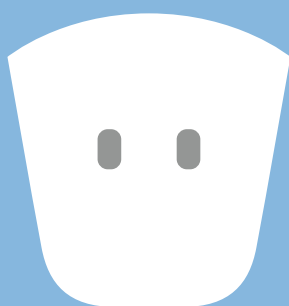

If AV1's head is blue, the student is passive and does not want to be disturbed.

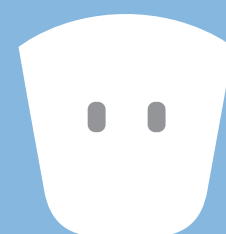

When the light is pulsating on AV1's head, the student wants to say something.

On AV1's back you find LED indicators showing network and battery status.

A flashing red light means the AV1 is experiencing connectivity issues. When the lights remains solid white the AV1 has reconnected to the network.
