

If AV1's head is **blue**, the student is in passive mode and does not want to be disturbed.

When the light on the head flashes **green**, it means the pupil is raising their hand and would like to say something.

A flashing **red** light signals a connectivity issue. A solid white light shows that AV1 is back online.

Remember to charge AV1 every night.

On AV1's back, you'll find LED indicators for network and battery status.
