

Section 1: Management Responsibility

1.2 Environmental Policy

It is the Policy of IRS to value and satisfy customers and suppliers by providing high quality services including refrigeration, air conditioning and energy management.

It is the strategy of IRS to be a responsible corporate citizen in protecting the environment and continuing to have as minimal impact as possible on the environment. To achieve this IRS will:

- Recycle and reuse where possible
- Reduce energy and waste output where possible
- Increase the environmental awareness and training of staff
- Provide adequate and effective emergency response processes

To ensure the strategy is implemented, measurable company objectives are set, communicated and reviewed by the senior management team in the management review as outlined in the Management System. IRS are committed to achieving, and where possible exceeding, the requirements of BS EN ISO 14001: 2015; which is continually reviewed and improved through the management procedures outlined in the company manual.

IRS are committed to complying with accepted environmental practices, including the commitment to meet or exceed applicable legal and other requirements, to strive for continual improvement in our environmental management system, and to minimise the creation of wastes and pollution. We will, therefore, manage our processes, materials, and resources in order to reduce the environmental impacts associated with our work.

This Policy is authorised by the undersigned and operation of the procedures documented in the system are mandatory on all staff and sub-contractors. The policy will be communicated and made available to all parties interested in the performance of our environmental management system.
